## **1. OVERVIEW OF THE EXTRAMURAL RESEARCH AND TRAINING GRANTS PROGRAM OF THE AMERICAN CANCER SOCIETY**

With a primary focus on beginning investigators, the American Cancer Society's Extramural Grants Program seeks to support innovative cancer research across a wide range of disciplines to meet critically important needs in the control of cancer.

Each year, the Society receives approximately 2,000 requests for support of cancer research and for training of health care professionals. All proposals are subjected to multiple levels of rigorous and independent peer review to identify the most meritorious projects for funding.

The Society offers extramural support for research and training via the programs described below. For program specific information, please see Section 19.

### **GRANT MECHANISMS**

#### **RESEARCH GRANTS FOR INDEPENDENT INVESTIGATORS**

**Research Scholar Grants**— Applicants must be independent, self-directed researchers within six years of their first academic appointment. The maximum award is for 4 years and for as much as \$165,000 per year (direct costs), plus 20% allowable indirect costs.

The only eligibility exception is in the Priority Focus on Health Equity Research in the Cancer Control and Prevention Research Program, which is restricted to: research studies in psychosocial, behavioral, health policy or health services which address cancer health equity and disparities. In this case, investigators can be at any stage of their career.

A second award and term exception is made for applications in **population-based** psychosocial or behavioral studies; awards up to a maximum of 5 years and \$400,000 per year (direct costs), plus 20% allowable indirect costs.

**Institutional Research Grants**—Awarded to institutions as block grants to provide seed money for newly independent investigators to initiate research projects. Grants are made for one to three years, and average \$120,000 per year. These grants are renewable.

#### **MENTORED TRAINING AND CAREER DEVELOPMENT GRANTS**

**Postdoctoral Fellowships**—Support for researchers who have received a doctoral degree to provide training leading to an independent career in cancer research. Awards may be for three years with progressive stipends of \$48,000, \$50,000, and \$52,000 per year, plus a \$4,000 per year fellowship allowance. In addition, \$1,500 will be provided in the last year for travel costs to attend the ACS Postdoctoral Fellows Symposium, if offered that year, or travel to a domestic scientific meeting

**Mentored Research Scholar Grants**—Provides support for mentored research and training to full-time junior faculty, typically within the initial four years of their first independent

appointment. The goal is for these beginning investigators to become independent researchers as either clinician scientists or cancer control and prevention researchers. Awards are for up to five years and for up to \$135,000 per year (direct costs), plus 8% allowable indirect costs. A maximum of \$10,000 per year for the mentor(s) (regardless of the number of mentors) is included in the \$135,000.

**Cancer Control Career Development Awards for Primary Care Physicians**—Support for primary care physicians in supervised programs intended to develop clinical and teaching expertise and the capacity to perform independent research or educational innovation in cancer control. Awards are for 3 years and for up to \$100,000 per year. A maximum of \$10,000 per year for the mentor(s) may be included in the budget.

**Physician Training Awards in Cancer Prevention**—Awards to institutions to support physician training in accredited preventive medicine residency programs that provide cancer prevention and control research and practice opportunities. Awards are for four and one half years in the total amount of \$300,000, based on an average of \$50,000 per resident training year. These grants are renewable.

## **PREDOCTORAL TRAINING**

**Doctoral Training Grants in Oncology Social Work**—Awards to doctoral students to conduct research related to the psychosocial needs of persons with cancer and their families. Initial 2-year grants providing a stipend of \$20,000 per year with possibility of a 2-year competitive renewal.

**Master's Training Grants in Clinical Oncology Social Work**—Awards to institutions to support the training of second-year master's degree students to provide psychosocial services to persons with cancer and their families. Beginning in July 2012, the grant term will be two years with annual funding of \$12,000 (trainee award of \$10,000 and \$2,000 for faculty professional development). These grants are renewable.

**Doctoral Degree Scholarships in Cancer Nursing**—Provide support for study in a doctoral degree program in nursing or a related area, and prepare the graduate for a career as a cancer nurse scientist. The initial award is for two years and provides a stipend of \$15,000 per year. Scholarships may be renewed for an additional two years based on satisfactory progress.

**Graduate Scholarships in Cancer Nursing Practice**—Support for graduate students pursuing a master's degree in cancer nursing or doctorate of nursing practice (DNP). Awards may be for two years with stipend of \$10,000 per year.

## **AMERICAN CANCER SOCIETY PROFESSOR AWARDS**

**Research Professor Awards**—Awarded to outstanding mid-career investigators who have made seminal contributions that have changed the direction of cancer research. In general, applicants will recently have attained the rank of full professor. The awards are for 5 years in the total amount of \$400,000, and may be renewed once.

**Clinical Research Professor Awards** —Awarded to outstanding mid-career investigators who have made seminal contributions that have changed the direction of clinical, psychosocial, behavioral, health policy or epidemiologic cancer research. In general, applicants will recently have attained the rank of full professor. The awards are for 5 years in the total amount of \$400,000, and may be renewed once.

## **INTERNATIONAL PROGRAMS**

**Audrey Meyer Mars International Fellowships in Clinical Oncology**—Support for one year of advanced training in clinical oncology at participating US cancer centers to qualified physicians and surgeons from other countries, particularly countries where advanced training is not readily available. This program is limited to non-US citizens and provides up to \$40,000 annually. Annual application deadline is December 1.

**American Cancer Society - UICC International Fellowships for Beginning Investigators**—One-year fellowships of up to \$45,000 funded by the American Cancer Society to advance the academic career development of beginning cancer investigators from low-, lower-middle- and upper-middle-income countries as defined by the World Bank. Funding preference will be given to applicants who propose to conduct translational, clinical, epidemiologic, psychosocial, behavioral, health services or health policy research. Application forms may be obtained from the UICC Fellowship Department at <http://fellows.uicc.org/>

## **SPECIAL INITIATIVE**

### **PRIORITY FOCUS ON HEALTH EQUITY RESEARCH IN THE CANCER CONTROL AND PREVENTION RESEARCH GRANTS PROGRAM**

Despite the steady overall decline in cancer incidence and mortality rates in the United States, not all population groups have benefited equally. Differences exist in rates of incidence, prevalence, mortality and related adverse health conditions in subgroups of the US population. If application of the existing knowledge about cancer prevention, early detection and treatment were delivered equally, disparities in cancer could be substantially reduced or eliminated. Achieving health equity by establishing inclusive health and social systems whereby all people are treated equitably creates conditions for improving health outcomes.

The American Cancer Society (ACS) has a longstanding history of advocacy, education, community outreach and research in the area of cancer disparities and continues to recognize the importance of research in the area. As highlighted in reports by the Agency for Healthcare Research and Quality and the Institute of Medicine, inequitable differences or health disparities are linked to various determinants of health. The determinants of health are interrelated risk factors that extend across the life span to impact health. Environmental conditions—the conditions in which people are born, live, play, thrive, work and worship—and the available systems supporting health comprise the social determinants of health. Integral to these influences are the economic, political and social policies that exist in and shape communities. Besides

sociopolitical influences, biology, genetics/genomics and individual behaviors are also determinants of health. Inequity and health disparities may be further characterized by age, gender, disability status, ethnicity/race, geography, income, language, social class, or sexual orientation. The National Stakeholder Strategy for Achieving Health Equity, supported by the US Department of Health and Human Services Office of Minority Health, presents an action-oriented blueprint to move the nation towards achieving health equity by combating health disparities with a comprehensive, community-driven approach. The ACS has overlapping goals and is committed to addressing cancer health equity through research, education, advocacy and service.

The ACS Extramural Research and Training Grants Department identifies research addressing health equity and health disparities as a priority. Within the Cancer Control and Prevention Research Program of the Department, grant applications in psychosocial and behavioral research and in health policy and health services research focused on achieving health equity and eliminating health disparities are welcome from principal investigators at any career stage. This expanded eligibility is unique to the Priority Area Targeting Health Equity and Health Disparities in Cancer Prevention and Control. Applicants must explicitly specify the following within the application: (1) relevance to cancer generally and cancer disparities specifically; (2) how findings from the proposed research will substantially improve equity in access to cancer prevention, early detection, diagnosis, and/or treatment services; and (3) how findings may be applied to more quickly advance efforts to reduce cancer burden or costs, improve quality of care or quality of life, and/or save more lives.

Applications will be accepted using one of four mechanisms: Postdoctoral Fellowship, Mentored Research Scholar Grant, Research Scholar Grant, or Clinical Research Professor. Annual deadlines: April 1 and October 15.

## **REQUESTS FOR APPLICATIONS (RFAs)**

**Pilot and Exploratory Projects in Palliative Care of Cancer Patients and their Families —** Supports investigators performing pilot and exploratory research studies that test interventions, develop research methodologies, and explore novel areas of research in palliative care of cancer patients and their families. Applications will be accepted via the Pilot and Exploratory Grants Mechanism. The maximum award is for 2 years and up to \$60,000 per year (direct costs) plus 20% indirect costs. Annual Deadlines: April 1 and October 15

**Pilot and Exploratory Studies Using Community-Based Participatory Research (CBPR) to Achieve Cancer Health Equity**-This RFA supports the funding of pilot studies using community-based participatory research (CBPR) as a means to achieve cancer health equity. It is offered in collaboration with the American Cancer Society (ACS) Midwest Division to support researchers in that geographic region. An investigator may be at any career stage, but must be a resident of the Midwest Division of the American Cancer Society (Iowa, Minnesota, South Dakota and Wisconsin). Applications will be accepted via the Pilot and Exploratory Grants Mechanism. The maximum award is for two years and up to \$50,000 per year (including indirect costs.) It is anticipated that a total of \$400,000/year for two years will be available to fund four grants per year. Annual Deadlines: April 1 and October 15.

**Research Scholar Grant in the Role of Healthcare and Insurance in Improving Outcomes in Cancer Prevention, Early Detection and Treatment**—Supports projects that investigate how healthcare costs, healthcare system structure and capacity, socioeconomic factors (including insurance status), personal characteristics (such as race and ethnicity), and delivery of healthcare services affect outcomes related to cancer prevention, early detection, and treatment. The purpose is to stimulate research on the effects of the US healthcare system structure and the role of insurance on access to screenings and treatment. Applications will be accepted via the Research Scholar Grant in Cancer Control and Prevention Program. The maximum award is for 4 years and up to \$200,000 per year (direct costs) plus 20% indirect costs. Annual Deadlines: April 1 and October 15.

## **GRANT PROGRAMS**

**HEALTH PROFESSIONAL TRAINING IN CANCER CONTROL** – Virginia Krawiec, MPA, Program Director

This program provides grants in support of nurses, physicians and social workers to pursue training in cancer prevention and control practice. The program's goal is to accelerate the wide application of research findings in cancer prevention and control by increasing the number of nursing and social work clinicians, and researchers and physicians with expertise and career commitment to cancer control.

**MOLECULAR GENETICS & BIOCHEMISTRY OF CANCER** – Michael Melner, PhD, Program Director

This program focuses on genes involved in cancer and how alterations in those genes (mutations, deletions, and amplifications) play roles in the process. Of particular interest is the examination of the molecules involved in cancer (proteins, nucleic acids, lipids, and carbohydrates) and how their activities affect the disease. The program highlights new targets for prevention, detection, and treatment of cancer.

**CANCER CELL BIOLOGY AND METASTASIS** – Charles Saxe, PhD, Program Director

The primary goal of this program is to provide an understanding of the nature of cancer cells so they can be more effectively controlled and eliminated. Emphases include understanding the fundamental controls of normal and cancer cells with a focus on how cells regulate when to grow, when to divide and when to die; how cells create an identity and how cells relate to the local environment and to other cells; how cells regulate when and how to move from one site to another

**PRECLINICAL AND TRANSLATIONAL CANCER RESEARCH** – William Phelps, PhD, Program Director

This program focuses at the interface between laboratory investigations and human cancer. The scope of the program includes investigations of the role of infectious diseases in cancer, the discovery, synthesis, and delivery of cancer drugs, the creation and use of animal models of cancer, and the role of individual or groups of genes in different types of cancer.

**CLINICAL CANCER RESEARCH AND IMMUNOLOGY** – William H. Chambers, PhD,  
Program Director

The Program focuses on increasing clinical cancer research derived from advances in basic and epidemiologic cancer research. Pursue clinical trials of new imaging agents and modalities monitoring cancer development, progression and response to therapy. Improve understanding of cancer-related inflammatory responses, immunosurveillance and immunotherapy. Increased use of the immune system for cancer prevention. Integration of immunotherapy into combination therapies for cancer. Increase the mechanistic and epidemiological understanding of the effects of the environment and nutrition on cancer prevention, initiation and progression.

**CANCER CONTROL AND PREVENTION RESEARCH** –Elvan C. Daniels, MD, MPH,  
Program Director

The program focuses on the study of behaviors (of individuals, health care professionals, or health care systems) or interventions in changing these behaviors or systems which result in a reduction in cancer risk, improved early detection, better informed decision-making, or improvements in the quality of life of patients and families. Special emphasis is placed on research focused on achieving health equity in disadvantaged groups.

## **2. AUTHORITY FOR MAKING GRANTS**

All American Cancer Society grants and awards are made by the Chief Executive Officer on behalf of the Society's Board of Directors.

## **3. SOURCE OF FUNDS**

The American Cancer Society obtains its funds principally from public donations collected annually by our many dedicated volunteers. In order to disseminate information about the Society's Extramural Research and Training Grants Program to our volunteers and to the public, grantees may occasionally be asked to give brief presentations to professional and lay audiences.

## **4. WHO MAY APPLY**

Applicants for American Cancer Society grants and awards must at the time of application be United States citizens, noncitizen nationals, or permanent residents of the United States. Permanent residents must submit (as a .pdf copy) with the application notarized evidence indicating that they have a Resident Alien Card or "Green Card" (I-551) or have been approved for the issuance of such card as evidenced by an official passport stamp of the United States Immigration Service or a form I-797 Notice of Action which indicates that the application for permanent residence has been approved. Non-citizen nationals are persons who, although not US citizens, owe permanent allegiance to the United States. They are generally persons born in outlying US possessions (e.g., American Samoa and Swains Island).

Although applicants may apply for multiple awards, a grantee may not be the principal investigator on more than one ACS Grant at any time. Exceptions are made for recipients of grants that are in response to RFAs and for PIs of Institutional Research Grants.

## **Policies and Procedures for Collaborations between ACS Intramural Scientists and Extramural Scientists Seeking Society Funds to Support Their Project**

- 1) Extramural scientists are allowed to submit grant applications for funding which include collaborations with ACS Intramural Research scientists
- 2) In most cases, the use of ACS research resources will require that at least one ACS intramural scientist is included as a collaborator on a grant application. Therefore prior to submission of an application, the collaboration between extramural scientists and intramural scientists must be established according to the policies and procedures established by ACS Intramural Research.
- 3) Intramural scientists and their staff may participate in grants and contracts in a number of ways, including:
  - Serving as unpaid consultants, collaborator, co-investigator or mentor. Intramural scientists may not serve as a principal investigator on an ACS grant or contract.
  - Contributing to the conceptualization, design, execution, or interpretation of a research study.
  - Having primary responsibility for a Specific Aim within a standard research project grant (e.g. RSG).
  - Developing/contributing data for an extramural collaboration.
  - Participating in a multi-institutional collaborative arrangement with extramural researchers for clinical, prevention, or epidemiological studies.
- 4) ACS Intramural scientists may not receive salary support, travel expenses, or other funds from ACS-funded grants [or contracts?].
- 5) The intramural scientist or extramural scientist may have access to reagents, probes, laboratory equipment or access to data and to conduct the extramurally funded portion of the research, as established in their collaborative agreement.
- 6) While intramural scientists may write a description of the work to be performed by intramural, they may not write an applicant's grant application or offeror's contract proposal. If the grant applicant or contract offeror writes the section of the grant application or contract proposal that describes the proposed collaboration, the intramural scientist should review and approve that section.
- 7) ACS intramural scientist participation must comply with the policies and procedures related to conflict of interest, non-disclosure and disclosure regulations and conflict of interest.
- 8) ACS intramural scientists must file annual and final research reports related to their activities associate with any grant or contract awarded through the Extramural Grants Department.

<sup>1</sup>Adapted from document NIH Policy 54815 Implementation of Cooperative Agreement, ☐and "Funding of Intramural Research Program/Extramural Research Program Collaborations" [<http://sourcebook.od.nih.gov/ethic-conduct/fund-irp-erp-3-00.htm>], and "Opportunities and Guidelines to Facilitate Scientific Collaborations" [<http://www.niaid.nih.gov/researchfunding/grant/Pages/extraintracollab.aspx>]

## 5. ELIGIBLE INSTITUTIONS AND INSTITUTIONAL RESPONSIBILITIES

The Society's grants and awards are made to not-for-profit institutions located within the United States, its territories, and the Commonwealth of Puerto Rico. A not-for-profit institution is one that –IF REQUESTED– can provide:

- A current letter from the Internal Revenue Service conferring 501(c)(3) status,
- Documentation of an active cancer research program, and
- Assurance that the entity is not affiliated or funded by the tobacco industry.

Unsolicited grant applications will not be accepted from, nor will grants be made for, the support of research conducted at for-profit institutions, federal government agencies (including the National Laboratories), or organizations supported entirely by the federal government (with the exception of postdoctoral fellowship applications) or organizations, such as Foundations operated by, and for the benefit of, Veteran Affairs Medical Centers, whose primary beneficiaries are federal government entities. Applications may be submitted by qualified academic institutions on behalf of Veteran Affairs Medical Centers, provided that a Dean's Committee Memorandum of Affiliation is in effect between the two institutions.

The American Cancer Society does not assume responsibility for the conduct of the activities that the grant supports or the acts of the grant recipient as both are under the direction and control of the grantee institution and subject to the institution's medical and scientific policies. Grantee institutions must safeguard the rights and welfare of individuals who participate as subjects in research activities by reviewing proposed activities through an Institutional Review Board (IRB), as specified by the National Institutes of Health Office for Human Research Protections, US Department of Health and Human Services. Furthermore, grantee institutions must adhere to DHHS guidelines as well as ACS guidelines regarding conflicts of interest, recombinant DNA, scientific misconduct, and all other ACS policies and procedures applicable to the grant application and grant. These policies apply to applicants and applicant institutions as well.

To signify agreement by the institution to all ACS policies and procedures, an application for a grant must bear the signature of the official authorized to sign for the institution. Signature of the department head is also required. Additional signatures are at the discretion of the institution.

The institution is responsible for verifying that all documentation related to the application and/or grant, including all representations made by any named researcher, is correct. It is the responsibility of the institution to immediately report to ACS any finding that any information presented to ACS in connection with the application and/or grant was false. It is also the responsibility of the institution to immediately report to ACS any action including recertification, loss of certification, breach of conflict, or misconduct, or any change in a named researcher's employment status with the institution, including administrative leave, which may occur during the term of any award that is pertinent related to the work described in the grant application. Failure to abide by the terms above, or any other ACS policies and procedures in connection with the application and/or grant, may result in ACS suspending grant funding, or canceling the grant, to be decided by ACS in its sole discretion.

**By accepting an American Cancer Society award, you agree to the Guidelines for Maintaining Research and Peer Review Integrity that can be found in the appendix of these policies.**

## **6. TOBACCO-INDUSTRY FUNDING POLICY**

Scientific investigators or health professionals who are funded by the tobacco industry for any project, or whose named mentors in the case of mentored grants are funded by the tobacco industry for any project, may not apply and will not be eligible for American Cancer Society research and training grants. Scientific investigators, health professionals, or named mentors who accept funding from the tobacco industry for any project during the tenure of an American Cancer Society research or training grant must inform the Society of such funding, whereupon the American Cancer Society grant will immediately be terminated. Tobacco industry funding includes: funds from a company that is engaged in, or has affiliates engaged in the manufacture of tobacco produced for human use; funds in the name of a tobacco brand, whether or not the brand name is used solely for tobacco goods; funds from a body set up by the tobacco industry or by one or more companies engaged in the manufacture of tobacco goods.

The following do not constitute tobacco industry funding for the purposes of this policy:

- Legacies from tobacco industry investments (unless the names of a tobacco company or cigarette brand are associated with them);
- Funding from a trust or foundation established with assets related to the tobacco industry but no longer having any connection with the tobacco industry even though it may bear a name that (for historical reasons) is associated with the tobacco industry.

Tobacco industry funding is defined for purposes of Society grants and awards applicants and recipients as money provided or used for all or any of the costs of the research, including personnel, consumables, equipment, buildings, travel, meetings, and conferences, running (operating) costs for laboratories and offices, but not meetings or conferences unrelated to a particular research project.

## **7. PEER REVIEW OF APPLICATIONS**

The Society's Scientific Program Directors distribute the applications to the most appropriate Peer Review Committee and then assign each application to at least two committee members for independent and confidential review. Each committee generally has between 12 and 25 members who are leaders in their areas of expertise, plus up to three “stakeholders.” A stakeholder is an individual usually without formal training as a scientist or health professional who has a strong personal interest in advancing the effort to control and prevent cancer through research and training. This interest could stem from a personal experience with the disease, such as survivorship, a family cancer experience, or being a caregiver.

Depending on the grant applied for, the committees evaluate applications based on some or all of the following criteria: (a) the scientific merit, originality, and feasibility of the application; (b) the qualifications, experience and productivity of the applicant, and the members of the

investigative team; (c) the facilities and resources available; and (d) the promise of the research or training as related to the control of cancer or to the benefit to be gained by persons with cancer. At the Peer Review Committee meeting, the applications are discussed and a priority score is voted for each. Written evaluations of each application are provided to the Council for Extramural Grants (the Council). The Council is a multidisciplinary panel of senior scientists, many having previously served on a Peer Review Committee, up to three stakeholders, and the Chair of the Society's Research and Medical Affairs Committee serving as an ex officio, non-voting member. After considering the relative merit of the applications, the amount of available funds and the Society's objectives, the Council establishes the pay line to determine which grants will be funded during each cycle. No voting member of a Peer Review Committee or of the Council may be a member of the ACS staff or serve concurrently on the Board of Directors or the National Assembly of the American Cancer Society.

**In general, applications that are not funded may be revised and resubmitted twice; postdoctoral fellowship applications may only be resubmitted once.** Resubmitted applications will be reviewed in the same detail and compete on an equal basis with all other new applications. (See Instructions for additional information on resubmission of applications.)

## **8. APPLICATION DEADLINES**

Applications for grants and awards must be submitted as paper and electronic copies via proposalCENTRAL. Access is available using links provided in the American Cancer Society web site [www.cancer.org](http://www.cancer.org) (*see Instructions*). The electronic applications must be submitted at the proposalCENTRAL website by close of business (5:00 PM EST) on the specified deadline date. For the convenience of the applicant, paper copies are due one day after submission of the electronic copy. **If the deadline falls on a weekend or holiday, applications will be accepted the following business day.**

No supplemental materials will be accepted after the deadline unless requested by staff for administrative purposes or when requested by the reviewers. The schedule for application receipt and review is provided in the following table.

## DEADLINE, REVIEW, NOTIFICATION, AND ACTIVATION SCHEDULE

<b>GRANTS</b>	<b>Deadline for Receipt of Electronic Applications*</b>	<b>Peer Review Meeting</b>	<b>Preliminary Notification</b>	<b>Council Meeting</b>	<b>Grantee Notification</b>	<b>Activation</b>
<b>Research Scholar Grant</b>	April 1 October 15	June January	August March	Sept. March	October April	January 1 July 1
<b>Mentored Research Scholar Grant</b>	April 1 October 15	June January	August March	Sept. March	October April	January 1 July 1
<b>Postdoctoral Fellowship</b>	April 1 October 15	June January	August March	Sept. March	October April	January 1 July 1
<b>Institutional Research Grant</b>	April 1	June	August	Sept.	October	January 1
<b>Physician Training Award in Cancer Prevention</b>	April 1	June	August	Sept.	October	January 1
<b>Research Professor Award</b>	LOI Deadline: February 1	June	NA	Sept.	October	January 1
	Application Deadline: April 1					
<b>Doctoral Training Grant in Oncology Social Work</b>	October 15	January	March	March	April	July 1
<b>Clinical Research Professor Award</b>	LOI Deadline: August 1	January	NA	March	April	July 1
	Application Deadline: October 15					
<b>Master's Training Grant in Clinical Oncology Social Work</b>	October 15	January	March	March	April	July 1
<b>Cancer Control Career Development Award</b>	October 15	January	March	March	April	July 1
<b>Doctoral Degree Scholarship in Cancer Nursing</b>	October 15	January	March	March	April	July 1
<b>Graduate Scholarship in Cancer Nursing Practice</b>	February 1	March	N/A	April	May	July 1

**\*Paper copies are due one business day following the deadline for electronic copies**

## **9. NOTIFICATION OF APPLICATION RECEIPT AND REVIEW**

Approximately one month after receipt of the application, applicants will receive an email acknowledgment providing an application number, the assigned Peer Review Committee, and the name and telephone number of their Scientific Program Director. This email will be sent to the address in the Professional Profile supplied at the time of submission in proposalCENTRAL. It is important that the address listed in the Professional Profile is a viable mailing address as it will be used to notify you throughout the review and award process.

**Preliminary Notification.** Following review, preliminary information regarding the status of an application will be emailed along with instructions to download copies of the reviewers' critiques. The notification will also indicate the likelihood of funding as described by one of the following phrases: experience suggests that (a) your application will be funded, (b) we cannot predict at this time or, (c) your application will not be funded. Please note that all final funding decisions are made by the Council for Extramural Grants which typically meets in March and September.

Applicants may call the Extramural Grants Department at anytime during the review cycle. The Program Director and Program Coordinator will shepherd your application through the entire process. Following receipt and careful consideration of the critiques, applicants are encouraged to contact their Program Director to discuss their review. For those applicants considering resubmission, it is strongly encouraged that they contact their Program Director well in advance of the next deadline.

## **10. GRANT MANAGEMENT AND PAYMENTS**

New grantees will receive a packet of information which includes instructions for activation of the award. The activation form as well as other important information about the grant can be found at <https://proposalcentral.altum.com>. Select the Award tab to see the Post Award Management Site.

Grant payments will be made at the end of each month, except for nursing scholarships and social work grants, which are made once yearly at the beginning of the year. The American Cancer Society requires that all payments are made to the sponsoring institution and are mailed to the address indicated on the grant activation form. Acknowledgment of payment by the sponsoring institution is not required. Continued funding by ACS throughout the grant period is contingent upon institution complying with all of the terms related to the grant; and failure to comply with all of the grant terms may result in a suspension of grant funding, or cancellation of the grant, to be determined by ACS in its sole discretion.

Personnel compensated in whole or in part with funds from the American Cancer Society are not considered employees of the Society. Institutions are responsible for issuing the appropriate IRS tax filings for all individuals receiving compensation from American Cancer Society grants and are responsible for withholding and paying all required federal, state, and local payroll taxes with regard to such compensation. Any tax consequences are the responsibility of the individual

recipient and the sponsoring institution. We advise all grant and award recipients to consult a tax advisor regarding the status of their awards.

## 11. ANNUAL AND FINAL PROGRESS REPORTS

The following policies apply to Research Scholar Grants, Mentored Research Scholar Grants, and Postdoctoral Fellowships. For all other grants, see the appropriate "Required Progress Reports" sections. Annual and final reports represent a critical part of responsible stewardship of the donated dollars. We greatly appreciate your efforts to assist us in fulfilling this important commitment to our donors.

- A. Both nontechnical and scientific progress reports are to be submitted each year within 60 days after the first and subsequent anniversaries of the start date of the grant, and final reports are due within sixty days after the grant has terminated. To access the necessary forms for annual and final progress reports, please go to <https://proposalcentral.altum.com>.
- B. The final report should cover the entire grant period. In the event a grant has been extended without additional funds, the final report is not due until the official termination date of the grant. If the grant is terminated early, a final report must still be completed within 60 days of the termination date.
- C. Reports are to be submitted in a timely manner. If this is not possible, a written request to extend the reporting deadline must be made. Otherwise, noncompliance may result in the withholding of payment on all grants in effect at the recipient institution until reports are received.
- D. Please note that up to date annual reports are required when requesting any grant modifications including transfers or no cost extensions.

## 12. PUBLICATIONS AND OTHER RESEARCH COMMUNICATIONS

Publications resulting from research or training activities supported by the American Cancer Society must contain the following acknowledgment: "Supported by (insert name of grant and number) from the American Cancer Society." In the event that there are multiple sources of support, the acknowledgment should read "Supported in part by (insert name of grant and number) from the American Cancer Society" along with references to other funding sources. The Society's support should also be acknowledged by the grantee and by the institution in all public communication of work resulting from this grant, including scientific abstracts (where permitted), posters at scientific meetings, press releases or other media communications, and Internet-based communications.

Although there is no formal approval process for publications by Society grantees, **it is helpful if investigators notify their Program Directors when manuscripts have been accepted for future publication.** This will allow ample time to consider and coordinate any additional public or Society-wide notifications. If your institution decides to send out a **press release** involving any of your Society-supported research, please notify your local ACS Division office (phone number on your award letter) or your Program Director in advance.

ACS grants to you a limited, revocable, non-transferable license to use the ACS logo (as shown below) in connection with your funded work. We encourage you to use the following ACS logo

on any scientific poster, in a Power Point presentation, or any other visual presentation about your funded work where the ACS is noted as a funding source. In turn you agree to provide any materials featuring the ACS logo to ACS upon our request.

Permission to use the logo is limited to the uses outlined in the above paragraph. Any other use must be evaluated and approved in writing by the ACS prior to any such use. Please contact your Program Director regarding any other proposed use of the logo.

### 13. FINANCIAL RECORDS AND REPORTS

A report of expenditures must be submitted within 90 days of the expiration date of the grant as indicated in the award letter. Any change in terms such as a no-cost extension will alter the date that the report is due. There are different reporting requirements for the Institutional Research Grant (please see the "Required Financial Reports" section in the IRG policies). Annual financial reports are not required. To access the necessary forms, please go to <https://proposalcentral.altum.com>.

Signatures of the principal investigator and the institution's financial officer are required. **Any unexpended funds must be returned to the Society.**

Reports are to be submitted in a timely manner. If this is not possible, a written request to extend the reporting deadline must be made. Otherwise, non-compliance may result in the withholding of payment on all grants in effect at the recipient institution until reports are received.

Institutions must maintain separate accounts for each grant, with substantiating invoices available for audit by representatives of the American Cancer Society. The Society is not responsible for expenditures made prior to the start date of the grant, costs incurred after termination or cancellation of the grant, or for commitments against a grant not paid within 60 days following the expiration date, or any expenditure that exceed the total amount of the award. (See also section 18, "Cancellation.")

### 14. EXPENDITURES

American Cancer Society *research* grants are not designed to cover the total cost of the research proposed nor the investigator's entire compensation. The grantee's institution is expected to provide the required physical facilities and administrative services normally available at an institution.

For grants that allow indirect costs, the calculation of allowable indirect costs includes all budget items except equipment. See the Instructions for allowable expenditures for Health Professional Training Grants (Nursing Scholarships, Social Work Training Grants, Cancer Control Career Development Awards and Physician Training Awards in Preventive Medicine).

**The Society's research grants do not provide funds (direct budget) for such items as:**

- Secretarial/administrative salaries

- Student tuition and student fees including graduate and undergraduate; however, tuition is an allowable expense for the principal investigator of a Mentored Research Scholar Grant.
- Foreign travel (special consideration given for attendance at scientific meetings held in Canada)
- Books and periodicals except for required texts for coursework in the approved training plan for MRSGs.
- Membership dues
- Office and laboratory furniture
- Office equipment and supplies
- Rental of office or laboratory space
- Recruiting and relocation expenses
- Non-medical services to patients (travel to a clinical site or patient incentives are allowable expenses)
- Per-diem charges for hospital beds
- Construction, renovation, or maintenance of buildings/laboratories

However, Society research and training grant funds can be used for computer purchases that are for research and training purposes, and can be purchased with direct funds from the equipment budget.

## **15. OWNERSHIP OF EQUIPMENT**

Equipment purchased under American Cancer Society research grants or extensions thereof is for the use of the principal investigator and collaborators. Title of such equipment shall be vested in the institution at which the principal investigator is conducting the research. In the event the American Cancer Society authorizes the transfer of a grant to another institution, equipment necessary for continuation of the research project purchased with the grant funds may be transferred to the new institution. Title to such equipment shall be vested in the new institution.

## **16. INTELLECTUAL PROPERTY RIGHTS**

As a not-for-profit organization supported by public contributions, the Society believes it has the responsibility to adopt policies and practices that enhance the likelihood that potentially beneficial discoveries and inventions will be exploited to the benefit of humankind. It is the desire of the Society that such inventions be administered in such a manner that they are brought into public use at the earliest possible time. The Society recognizes that often this may be best accomplished through patenting and/or licensing of such inventions. Accordingly, the Society has adopted the following patent policy that is binding on all Grantees and Not-for-profit Grantee Institutions (hereinafter "Grantee"). Acceptance of a grant from the Society constitutes acceptance of the terms and conditions of this policy. It is a goal of the Society that the terms and conditions of this policy not conflict with the established patent policy of Grantee.

A. All notices required pursuant to this policy shall be in writing, and in this policy, the following terms shall have the meaning set forth below.

- "Invention" shall mean any potentially patentable discovery, material, method, process, product, program, software or use.
- "Funded Invention" shall mean any Invention made in the course of research funded in whole or in part by this Society grant.

- iii. "Public Disclosure" shall mean any publication, presentation, offer for sale or any activity that would affect the patentability of the invention under 35 USC. § 102 or 103.
  - iv. "Net Income" shall mean gross income received by Grantee in respect of a Funded Invention less inventor distributions in accordance with Grantee policy, payments to joint holders of Funded Invention, and unreimbursed directly assignable out-of-pocket expenses resulting from patenting and licensing for Funded Invention.
- B. Grantee shall notify the Society of each Funded Invention made by Grantee within thirty (30) days after the disclosure of the Funded Invention to Grantee's Technology Transfer Office or the equivalent thereof. Grantee shall promptly determine whether it desires to seek patent or other statutory protection for all Funded Inventions promptly after each Funded Invention is made and shall promptly inform the Society of all decisions to seek or not seek such protection. The Society shall have the right to seek patent or other statutory protection, at the Society's expense, for any Funded Invention in any country where Grantee has decided not to seek protection or has failed to file an application for such protection within six (6) months after disclosure of the Funded Invention to the Society, and, upon the Society's request, Grantee shall file for patent protection for Funded Invention in such countries as directed by Society at the Society's expense.
- C. Grantee shall promptly notify the Society of the filing and issuance or grant of any application for a patent or other statutory rights for a Funded Invention and shall keep the Society reasonably informed of the status and progress of all such applications. Grantee shall pay all costs and expenses incident to all applications for patents or other statutory rights and all patents and other statutory rights that issue thereon owned by Grantee (other than as provided for in Sections B or C). Grantee shall also notify the Society at least sixty (60) days in advance of Grantee's intention to abandon any application for a patent or other statutory right for a Funded Invention or not to take action required to maintain any such application or any patent or other statutory right in a Funded Invention, in which event, at the request of the Society, Grantee shall continue patent protection for Funded Invention as directed by Society at the Society's expense (unless maintenance of such patent rights is inconsistent with Grantee's good name).
- D. Each of the Society and Grantee (the appropriate Grantee technology transfer officer managing Funded Invention) shall promptly inform the other of any suspected infringement of any patent covering a Funded Invention and of any misappropriation, misuse, theft or breach of confidence relating to other proprietary rights in a Funded Invention. Grantee and Society will discuss in good faith further action to be taken in this regard.
- E. Grantee shall notify the Society within thirty (30) days of grant of a license, lease, or other revenue generating agreement involving a Funded Invention. In the event that Grantee fails to license a Funded Invention within five (5) years from the issuance of a patent for the Funded Invention and the Grantee has determined no viable means of commercialization for Funded Invention, Grantee shall license the Funded Invention, with the right to sublicense, to the Society (under standard Grantee license terms on a royalty free basis). However,

should the Society receive any revenue from sublicensing the Funded Invention, it will share that revenue with Grantee on a mutually acceptable basis.

- F. Grantee will license a Funded Invention in accordance with Grantee Policy and established practices.
- G.
  - i. The Society waives the receipt of income until the Net Income from the Funded Invention exceeds \$500,000.
  - ii. Once the Net Income from a Funded Invention exceeds \$500,000, Grantee shall pay the Society annually a percentage of the Net Income from the Funded Invention that is proportionate to the Society's proportion of the financial support for the research that resulted in the Invention. Such royalty payment shall be accompanied by an appropriate statement of account detailing the amount and showing the calculation of Net Income received by Grantee during the preceding year. The Society shall have the right to audit the Grantee's books and records annually, in order to verify the Net Income derived annually from any Funded Invention.
  - iii. The percentage of Net Income due the Society from a Funded Invention shall be determined by the parties within 90 days of the date the Society is notified by the Grantee (to be extended by mutual agreement of both parties) pursuant to Section E above of the grant of a license, lease or other revenue generating agreement involving the Funded Invention.

If the parties are unable to agree on the percentage of Net Income payable to the Society or any amount owed to Grantee pursuant to Paragraph E above, the dispute (the "Dispute") shall be resolved as follows:

One of the parties shall request (the "Negotiation Request") that each of the parties appoint a designated executive management representative to meet for the purpose of endeavoring to resolve such Dispute. The designated executive representatives, who shall not have been directly involved in the initial negotiations, shall discuss the Dispute and negotiate in good faith in an effort to seek a resolution. During the course of such negotiation, all reasonable requests made by one party to the other for information will be honored so that each of the parties may be fully advised regarding the Dispute. If the designated executive representatives are unable to resolve the Dispute within 30 days after the Negotiation Request, the parties shall mediate the Dispute with a mutually acceptable mediator within the 30-day period beginning 31 days after the Negotiation Request. If the Dispute is not resolved by mediation within 60 days after the Negotiation Request, either party may initiate arbitration by delivering an arbitration demand to the other party (initiator of arbitration will travel to venue of other party), and the Dispute shall be settled by arbitration in accordance with the Commercial Arbitration Rules of the American Arbitration Association ("AAA"), except that

- (a) there shall be one arbitrator mutually agreed upon by both parties within 30 days after initiation of arbitration and if the parties are unable to agree upon an arbitrator, the arbitrator shall be appointed by AAA;

- (b) neither party may submit more than 20 interrogatories, including subparts;
- (c) neither party shall be entitled to take more than two depositions and no deposition shall last more than two hours;
- (d) all discovery shall be concluded within 90 days of serving the arbitration demand;
- (e) each party shall bear its own costs and expenses and attorney's fees and an equal share of the arbitrator fees and any administrative fees of the arbitrator; and
- (f) arbitration shall not be utilized if Grantee is prohibited by law from submitting itself to binding arbitration.

The award of the arbitrator shall be binding, and judgment upon the award rendered by the arbitrator may be entered in any court having jurisdiction thereof.

**Please note that the American Cancer Society is unable to renegotiate the terms of this agreement with any individual institution.**

## **17. EXTENSION OF TERM OF GRANT/TRANSFERS/LEAVE OF ABSENCE**

The termination date of any grant may be extended for up to one year without additional funds upon written request to the Program Director from the principal investigator. An extension of term request form can be found at <https://proposalcentral.altum.com>. Please include with the request an estimate of the funds to be carried over into the extension, and an explanation for the delay in completion of the specific aims – which aims remain incomplete and why. The Program Director must receive a written request 30 days before the expiration date of the grant.

Requests for a leave of absence will be handled on a case-by-case basis. Please contact the Program office prior to commencing leave.

To transfer or change institutions during a grant period, request forms can be found at the same site as above.

Please note that up to date annual reports are required prior to approval of any grant modifications including transfers and no cost extensions.

## **18. CANCELLATION OF GRANT**

If a grant is to be canceled prior to the original termination date, contact your Program Director and please fill out and submit the Request for Cancellation form which can be found at <https://proposalcentral.altum.com>.

The American Cancer Society may cancel a grant in its sole discretion if the institution fails to comply with all of the terms and obligations related to the grant. In the event a grant is canceled,

the institution is only entitled to the prorated amount of the award accumulated between the start and termination dates. **The Society cannot assume responsibility for expenditures in excess of payments already made to the grantee institution prior to the effective date of cancellation; following cancellation or termination of a grant, no additional payments will be provided to the institution, and all unexpended funds must be returned to the Society.**

Please note that if the award is to be canceled after initiation of the grant period, a final report will be due within 60 days of the termination date describing the work completed up to that point.

For Master's Training Grants in Clinical Oncology Social Work, Doctoral Training Grants in Oncology Social Work, Graduate Scholarships in Cancer Nursing Practice, and Doctoral Degree Scholarships in Cancer Nursing, withdrawal from the graduate program requires cancellation of the grant.

## **19. DESCRIPTION OF DOCTORAL DEGREE SCHOLARSHIPS IN CANCER NURSING**

The goal of this program is to strengthen nursing practice by providing assistance for advanced preparation in the field of cancer nursing research. This education will qualify the scholarship recipient for the award of a doctoral degree in nursing or a related field, and prepare the graduate for a career as a cancer nurse scientist.

Please read carefully the eligibility and other requirements set forth below before completing the application. Prospective applicants who are unsure of their eligibility or any other of the program requirements should contact the Society for clarification prior to submission of an application. Questions should be directed to:

Virginia Krawiec, MPA  
Director, Health Professional Training in Cancer Control  
Danielle Alsander, Program Coordinator  
404-329-5734  
danielle.alsander@cancer.org  
American Cancer Society  
Extramural Grants Department  
250 Williams Street NW, 6th Floor  
Atlanta GA 30303-1002

## **20. REQUIREMENTS FOR PROGRAM**

- A.** The program must be offered within an accredited academic institution in the United States that can award a doctoral degree in nursing or a related field of research.
- B.** The program must offer an affiliation with an organized multidisciplinary program in cancer control or cancer care that allows the applicant the flexibility to develop educational and research activities related to cancer nursing.
- C.** The program of study must be planned with faculty who are experts in the applicant's field of study and can guide the student's educational experiences.

## **21. REQUIREMENTS OF APPLICANTS**

- A.** The applicant must be currently enrolled in a doctoral degree program in nursing or a related field of research. Students in programs that award the doctorate of nursing practice (DNP) are not eligible for this program, but may apply for a Graduate Scholarship in Cancer Nursing Practice.
- B.** The applicant must continue to meet requirements for doctoral study.
- C.** The applicant must have a current license to practice as a registered nurse.
- D.** The applicant must project a program of study that integrates cancer nursing and provides evidence of faculty support for the program of study. Scholarship recipients must take a minimum of 18 credit hours or 6 courses per year (unless coursework has been completed and the student accepted to candidacy).
- E.** The applicant must demonstrate an ongoing commitment to cancer nursing as evidenced by recent experience, education, and/or research in the specialty area.

## **22. SELECTION CRITERIA**

For renewal applications, a great deal of emphasis will be placed on the scientific merit of the research plan in addition to the applicant's progress in other aspects of the doctoral program. A successful renewal application also will provide the evidence for:

- Participation in relevant continuing education
- Continued involvement in oncology professional organizations, including leadership roles;
- Sustained involvement in activities of cancer-related volunteer organizations;
- Conducting or planning to conduct research that is important, methodologically sound, and relevant to the health of persons affected with cancer or at risk for cancer;
- Evidence of progress in the areas of professional contributions (i.e., publications, memberships, etc.) and how these activities contribute to the student's doctoral studies and dissertation research; and
- Commitment from a faculty advisor / dissertation chair who is experienced in the student's area of study and will provide guidance in academic and research activities;

The complete criteria used by the peer reviewers are included in the Appendix to these Policies.

## **23. TERM OF SCHOLARSHIP**

The scholarship is intended to provide support for a minimum of one year and a maximum of four years of study in a graduate program leading to a doctoral degree. Scholarships become effective July 1.

The renewal application is for a second two-year grant, which may be prorated if the student graduates before the end of the academic year. This renewal will not compete with applications from candidates applying for new Doctoral Scholarships. Documentation of satisfactory progress in the graduate program and approval by the peer review committees is required for renewal. (See Required Reports.)

## **24. SCHOLARSHIP FUNDING**

The doctoral degree scholarship provides up to \$15,000 annually for subsistence and tuition expenses. Allowable expenses include, but are not limited to stipend, local transportation costs, computers, books and journals, professional organization membership dues, education and research-related conferences and workshops, health and dental insurance, research-related costs (research assistant, equipment and supplies, etc.) Subsistence expenses are living expenses during the student's time in the doctoral degree program.

Students who receive more than one year of funding may carry forward to subsequent years any unexpended funds. Specifically, funds remaining at the end of the first year of a two year scholarship may be used in the second year or carried over to a renewal grant at the end of the original scholarship.

Scholarship payments will be made to the institution office designated on the activation form; payments will be made once yearly in July. The institution may not charge indirect costs to the scholarship. The award is not transferable and may not be awarded to other students in the event of the recipient's withdrawal from the degree program.

## **25. REQUIRED REPORTS**

Scholarship recipients whose funding has ended are required to submit their final report within 90 days of completion of the grant period. The American Cancer Society will provide a form for this purpose.

## **26. CHANGE OF INSTITUTION/ADVISOR**

Recipients of a Doctoral Degree Scholarship in Cancer Nursing may not transfer their scholarship from one institution to another.

During the period from the receipt of an application through the end of an award, change of advisor requires written notice to the Society. Prior to a change, the American Cancer Society must receive a notice of the proposed change in writing, indicating the anticipated change date and the reason for the change. The letter must address the following:

- The total number of graduate and postdoctoral students who will be directly supervised by advisor during the term of scholarship.
- A representative list of previous students, their present employing organization, and position title or occupation (limit to five).
- Advisor's ongoing research activities that relate to your study.
- A brief description of advisor's relationship to date with you.

A Faculty Advisor/Dissertation Chair Biographical Sketch completed by the proposed advisor must also be included. This form is part of the application; contact the American Cancer Society to obtain a copy.

## **APPENDIX A: GUIDELINES FOR MAINTAINING RESEARCH AND PEER REVIEW INTEGRITY**

The American Cancer Society seeks excellence in the discovery and dissemination of knowledge regarding the cause, prevention, detection and diagnosis, treatment, survivorship and health policy of cancer. This requires that all individuals affiliated with, or funded by, the American Cancer Society adhere to the highest standards of professional integrity. Volunteer grant reviewers for the American Cancer Society will also be held to the highest codes of conduct and integrity in performing their essential function of peer review.

The American Cancer Society provides grant funds for individuals at academic and other not-for-profit institutions to promote cancer-related training, research and treatment. This represents a contractual relationship with such institutions, and it is an accepted responsibility and obligation of those institutions to provide policies and procedures for their faculty, staff and students that address possible misconduct in training, research and treatment of patients. Moreover, it is the responsibility and obligation of faculty, students and staff engaged in scientific research and training to be aware of policies and procedures for addressing possible misconduct at their institutions, and to follow those procedures in reporting possible misconduct.

While questions of the integrity of applicants, grantees, and reviewers are very infrequent, they do occur. It is the responsibility of the Program Directors managing the review process and portfolios of funded grants and the responsibility of the National Vice President for Extramural Research to ensure that all questions regarding research integrity are handled in a discrete, but thorough manner. The actions of the Program Directors and the National Vice President for Extramural Research must ensure the confidentiality and anonymity of the individual raising the question of misconduct; ensure the integrity of the American Cancer Society and its review processes; ensure the rights of the individual accused of misconduct; and ensure their own credibility and integrity.

### **Article I**

#### **Standards and Definitions:**

##### **1.1 Research Misconduct by Applicants or Grantees**

The American Cancer Society uses the following definitions related to scientific misconduct outlined in the Federal Guidelines [Federal Register, Vol. 65, No. 235, ppg. 76260-76264].

- Research misconduct is defined as fabrication, falsification, or plagiarism in proposing, performing, or reviewing research, or in reporting research results.<sup>1</sup>
- Research, as used herein, includes all basic, applied, and demonstration research in all fields of science, engineering, and mathematics. This includes, but is not limited to, research in economics, education, linguistics, medicine, biology,

chemistry, psychology, natural sciences, social sciences, statistics, and research involving human subjects or animals.<sup>1</sup>

- Fabrication is defined as making up data or results and recording or reporting them.<sup>1</sup>
- Falsification is defined as manipulating research materials, equipment, or processes, or changing or omitting data or results such that the research is not accurately represented in the research record.<sup>1</sup>
- The research record is defined as the record of data or results that embody the facts resulting from scientific inquiry, and includes, but is not limited to, research proposals, laboratory records, both physical and electronic, progress reports, abstracts, theses, oral presentations, internal reports, and journal articles.<sup>1</sup>
- Plagiarism is defined as the appropriation of another person's ideas, processes, results, or words without giving appropriate credit.
- Research misconduct does not include honest error or differences of opinion.<sup>1</sup>
- Reported Qualifications must be accurate (e.g. years since degree earned).

## **1.2 Research Misconduct by Peer Review Committee Members**

The American Cancer Society has adopted the following definitions of misconduct in review by members of a Peer Review Committee. Misconduct in review is defined as:

- Review for an application for which there is a clear conflict of interest between the reviewer and applicant. What is considered a COI – a recent publication, grant collaboration, trained together
- Failure to notify ACS personnel of actual, potential, perceived or potentially perceived conflicts of interest.
- Any communication pertaining to review related materials between a member[s] of a peer review committee and an applicant, or the mentor of an applicant, in the case of applications with an element of training as part of the application.
- Any communication of the unpublished content of a grant application by a member or members of a peer review committee with any individual who is not a permanent or ad hoc member of the peer review committee to which an application is assigned, or who has not been approved by the Program Director for such communication.
- Any use of the unpublished content or concepts of a grant application in pursuit of scientific or career goals by a member of a peer review committee.
- Any review of, or use of, the contents of a grant application by a member or members of a peer review committee who might have, or be perceived to have, a conflict of interest with the applicant or his/her mentor, in the case of applications with an element of training as part of the application

---

<sup>1</sup> The above definitions are outlined in the Federal Guidelines [Federal Register, Vol.65, No.235, ppg: 76260-76264]

### **1.3 Confidentiality Standard for Reviewers**

To preserve the integrity of the peer review process, all parties involved in the review process must adhere to the following practices regarding confidentiality and non-disclosure:

- Reviewers must not discuss applications reviewed with any individual not designated as a part of the review process; and especially not with applicants, or their mentors in the case of training grants, either before or after the peer review meetings.
- Any inquiries to a peer review panel member regarding an application from an applicant, PI, Co-PIs, consultants or their mentor, to a member of a Peer Review Committee or ACS Council for Extramural Grants must be reported immediately to the Program Director.
- All materials related to the review process must be destroyed or given to the Program Coordinator at the end of the review meeting.
- For purposes of this standard, materials related to the review process include, but are not limited to: paper, bound volumes, compact disks (CDs), flashdrives, electronic files accessed via the internet, or oral presentations or discussions.

### **1.4 Conflict of Interest Standard for Reviewers**

To preserve the integrity of the peer review process, all participants in the process must adhere to these principles and practices:

- Reviewers must not be an employer or employee of an applicant, and may not be employed by the same institution as an applicant within three years of the date of submission of an application
- Reviewers must not be a party to any agreement for future employment or other agreements or arrangements with an applicant or any person listed as key personnel on an application
- Reviewers must not have served as mentors or collaborators of an applicant within 3 years of the date of an application
- Reviewers must not participate in the review of an application submitted by a standing member of a Peer Review Committee serving on the same review committee, with the exception of Health Professional Training Grants or Institutional Research Grants
- Reviewers must not be under the health care of, or providing health care to, an applicant or any person listed as key personnel on an application
- Reviewers must not have received or have the potential to receive direct financial benefit from the application
- Reviewers must not be pursuing research projects which might be viewed as being in direct competition with applicants or their collaborators and colleagues; nor have potential to receive direct benefit from failure of the application to be funded

- Reviewers must not have any cause of action against, any dispute with, any long-standing scientific or personal differences with, or any claim whatsoever against the applicant or any person listed as key personnel on an application

## **Articles II**

### **Policies:**

#### **2.1 Policy Governing Misconduct by Applicants and Grantees**

##### **2.1.1 Applicants:**

Any allegations of scientific misconduct must be brought to the immediate attention of the Program Director in charge of the Peer Review Committee which is responsible for reviewing the work in question. If possible, allegations of misconduct on the part of an applicant in the submission of a grant proposal should be raised in advance of the review meeting. The Program Director will then bring the allegation to the attention of the National Vice President for Extramural Research at ACS. The National Vice President for Extramural Research will evaluate the allegation and make a determination on the misconduct issue and the appropriate next steps to be taken to engage in further investigation or action in accordance with Article III “Procedures for Handling Conflicts of Interest and Allegations or Findings of Misconduct in Research and Peer Review”.

##### **2.1.2 Grantees:**

In instances where alleged scientific misconduct occurs after the awarding of a grant, such as in the publication of falsified data, the Program Director will bring the allegation to the attention of the National Vice President for Extramural Research at ACS. The National Vice President for Extramural Research will evaluate the allegation and make a determination of the appropriate steps to be taken to engage in further investigation or action as defined in Article III, “Procedures for Handling Conflicts of Interest and Allegations or Findings of Misconduct in Research and Peer Review”.

#### **2.2 Policy Governing Misconduct by Peer Review Committee Members**

##### **2.2.1 Confidentiality:**

Confidentiality is at the heart of the peer review process and is imperative for objective evaluation and free expression in the review process. The applicant-reviewer relationship is a privileged alliance founded on the ethical rule of confidentiality.<sup>2</sup> To maintain the essence and integrity of the peer review process, the Society and its appointed peer reviewers must ensure and be assured that the confidentiality of the applicant’s information, the contents of the grant application, and of the proceedings of the review panel will be maintained. Such confidentiality adheres when a person discloses information to another with the understanding that the information will not be divulged to others without the discloser’s consent, or as otherwise required by law. In the context of peer review, this rule upholds the applicants’ rights to have the

information they submit, whether in proposal form or in communications, kept confidential. The rule also ensures that those involved in the review process maintain their obligation to keep confidential any information concerning an application. In fact, the very existence of a submission should not be revealed (or confirmed) to anyone other than those within the review process unless and until the application is funded.

To this end, all contents, evaluation and discussion of applications shall be confined to Peer Review Committee (PRC) members and ACS staff personnel (Program Director, National Vice President for Extramural Research, Program Coordinator, support staff) responsible for managing the review process of that PRC. For these purposes, reviewers include all standing and ad hoc reviewers of PRCs and members of the Council for Extramural Grants. In rare and specific instances, discussion of applications with, or in the presence of, non-committee members can occur after obtaining the written consent of the Program Director. Reviewers must not discuss reviews with applicants or their mentors in the case of training grants, either before or after the review meetings. Reviewers also must not communicate the contents of any grant applications with individuals not associated with the review process. Any materials related to the review process must be disposed of at the meeting, and all final critiques given to the Program Director for inclusion in summary statements.

If an allegation of a breach of reviewer confidentiality is brought forward, that allegation will be communicated to the National Vice President for Extramural Research who will determine if an investigation of that allegation is warranted. The National Vice President for Extramural Research will then follow the appropriate steps as defined in Article III, “Procedures for Handling Conflicts of Interest and Allegations or Findings of Misconduct in Research and Peer Review”.

#### 2.2.2 Conflict of Interest:

An objective evaluation of grant proposals is essential to the peer review process. In achieving this goal, there must be no conflict of interest, apparent conflict of interest or pending future conflict of interest between any participant in the review process and the applicants or their collaborators and colleagues. In this setting, reviewers include standing and ad hoc Peer Review Committee (PRC) members and members of the ACS Council for Extramural Grants responsible for, and participating in, the review process. There are numerous bases for conflicts of interest, and these can include: employment, professional relationships, personal relationships, financial benefit, industry affiliation or other interests. The conflicts can be real or apparent. For Definitions of Conflict of Interest, refer to Section 1.4.

Reviewers may not make use of any of the contents of a grant for their own research purposes or those of their collaborators and colleagues. Reviewers must exercise proper due diligence in investigating and disclosing any potential conflict of interest that might exist between themselves and an applicant or the applicant’s collaborators or mentors. The Conflict of Interest Statement attached as EXHIBIT A shall be submitted to the National Vice President for Extramural Research for review at least sixty (60) days prior to the beginning of the Peer Review cycle.

If an allegation of a reviewer conflict of interest is brought forward, that allegation will be communicated to the National Vice President for Extramural Research who will determine if an investigation of that allegation is warranted. The National Vice President for Extramural Research will then follow the appropriate steps as defined in Article III “Procedures for Handling Conflicts of Interest and Allegations or Findings of Misconduct”.

### **Article III**

#### **Procedures for Handling Conflicts of Interest and Allegations or Findings of Misconduct:**

To ensure the integrity of the peer review process and the integrity of ACS-sponsored research, it is necessary that the procedures for dealing with allegations of misconduct be clearly understood by all reviewers and ACS personnel. Procedures for handling allegations of misconduct by applicants, grantees and reviewers are detailed in the following sections.

#### **3.1 Procedures for Handling an Allegation of Scientific Misconduct by Applicants or Grantees**

##### **3.1.1 Misconduct by Applicants:**

In the event that an allegation of scientific misconduct by an applicant is brought forward to a Program Director or other ACS staff, all effort must be made to investigate the validity of the allegation while maintaining the confidentiality of the individual making the allegation, the anonymity of the person against whom the allegation is made, and the integrity of the review process. The Program Director must immediately inform the National Vice President for Extramural Research of the allegation, and provide all relevant information regarding the allegation. It is the National Vice President’s responsibility to evaluate the likelihood of scientific misconduct; and, if warranted, it is the National Vice President’s responsibility to contact the appropriate institutional office at the applicant’s institution regarding the allegation. The National Vice President for Extramural Research will then serve as the point of contact between the ACS and the institutional official[s] handling issues of scientific misconduct.

If determined to be appropriate, the National Vice President for Extramural Research will forward an allegation of misconduct and all pertinent information to the Research Integrity Officer at the institution sponsoring the grant application in question or at which the alleged misconduct was carried out. If there is not a Research Integrity Officer, the Dean of the School in question or its chief academic officer will be contacted. In the instance that the person[s] making the allegation does not contact the American Cancer Society but raises the allegation of misconduct with the appropriate institutional official according to their established institutional procedures, it is the responsibility of the institution to contact the American Cancer Society regarding the allegation, any investigation of the allegation, and the outcome of that investigation. All such correspondence will be held in strict confidence, and will not be made public by the American Cancer Society irrespective of the outcome of the investigation. The American Cancer Society assumes no responsibility in carrying out the investigation of scientific misconduct, or in determining an individual’s innocence or guilt of the allegation of misconduct.

However, acceptance or non-acceptance of the findings of the institutional investigation is at the discretion of the National Vice President, and additional clarification may be requested.

Allegations of scientific misconduct in a grant application may be made by individuals who are colleagues, trainees, or reviewers. In the instance that an allegation of misconduct is made in reference to a grant application, the National Vice President for Extramural Research will contact the institutional official at the sponsoring research institution and seek to follow their established protocol for investigating such allegations. If an investigation is deemed necessary, it will be the responsibility of the sponsoring institution to carry out the investigation, to keep the ACS aware of the progress, and to report the outcome of the investigation to the National Vice President for Extramural Research.

In fairness to the applicant, the review process must continue while the allegation of misconduct undergoes assessment. Review may continue either in the standing review committee or under the By-pass to Council review mechanism. *Under no circumstance* should a reviewer, Program Director or ACS staff raise the issue of the allegation in a peer review meeting or meeting of ACS Council for Extramural Grants. If that were to occur, review of that application could not be completed without bias; and review of the application must therefore be deferred to ad hoc reviewers or the ACS Council for Extramural Grants. If a reviewer suspects misconduct, which is discovered at the time of the meeting, it is appropriate to request the Chair of the PRC or Council take a "break" and discuss the issue privately with the Program Director. The Program Director will then take the proscribed administrative steps following the adjournment of the review meeting.

The ACS will complete the process of peer review of the application, but will suspend any administrative action which would result in funding of the award in question until the resolution of the investigation. At the conclusion of the investigation, the ACS will require the Office of Research Integrity or comparable entity at the applicant's sponsoring institution to provide a written statement detailing the results of the investigation. Failure of the institution to carry out such an investigation in a timely manner or to provide written results of the investigation will result in the administrative disapproval of the application. If the applicant is absolved of any scientific misconduct, the ACS will reinstitute administrative action that can result in funding for the award if it was approved and is within the pay-line established by ACS Council for Extramural Grants. In the instance that misconduct has occurred, the ACS will administratively inactive the application. Also, in the case of a finding of scientific misconduct, the investigator may no longer be eligible to participate in ACS funded awards, either as principal investigator, co-investigator, collaborator, mentor or consultant. The investigator also may not be eligible to serve in any capacity in reviewing ACS grant proposals.

### 3.1.2 Misconduct by Grantees:

In the event that an allegation of scientific misconduct by a grantee is brought forward to a Program Director or other ACS staff, all effort must be made to investigate the validity of the allegation while maintaining the confidentiality of the individual making the allegation and the anonymity of the person against whom the allegation is made. The Program Director or ACS staff contacted about the alleged misconduct must immediately inform the National Vice

President for Extramural Research of the allegation, and provide all relevant information regarding the allegation. It is the National Vice President's responsibility to evaluate the likelihood of scientific misconduct; and, if warranted, it is the National Vice President for Extramural Research's responsibility to contact the appropriate institutional office at the applicant's institution regarding the allegation. The National Vice President for Extramural Research will then serve as the point of contact between the ACS and the institutional official[s] handling issues of scientific misconduct.

If determined to be appropriate, the National Vice President for Extramural Research will forward an allegation of misconduct and all pertinent information to the Research Integrity Officer at the institution sponsoring the grant in question or at which the alleged misconduct was carried out. If there is not a Research Integrity Officer, the Dean of the School in question or its chief academic officer will be contacted. In the instance that the person[s] making the allegation does not contact the American Cancer Society but raises the allegation of misconduct with the appropriate institutional official according to their established institutional procedures, it is the responsibility of the institution to contact the American Cancer Society regarding the allegation, any investigation of the allegation, and the outcome of that investigation. All such correspondence will be held in strict confidence, and will not be made public by the American Cancer Society irrespective of the outcome of the investigation. The American Cancer Society assumes no responsibility in carrying out the investigation of scientific misconduct, or in determining an individual's innocence or guilt of the allegation of misconduct. However, failure of the institution to immediately notify ACS of an allegation and/or investigation of misconduct, or to carry out a misconduct investigation in a timely manner, or to provide written results of the investigation, is in non-conformance with the terms and obligations of the grant and may result in the suspension of ACS funds for all grants awarded at the institution, to be decided by ACS in its sole discretion. The American Cancer Society assumes no responsibility in carrying out the investigation of scientific misconduct, or in determining an individual's innocence or guilt of the allegation of misconduct. However, acceptance or non-acceptance of the findings of the institutional investigation is at the discretion of the National Vice President, and additional clarification may be requested.

If the investigator has an active ACS award, funding of that award will be suspended until the allegation has either been confirmed or be proven to be erroneous. If the allegation is proven not to have merit, the award may be reinstituted by ACS at the date of notification of those findings by the sponsoring institution. If the allegation of misconduct is confirmed, the award will be terminated and any residual funds, as of the date of notification of the sponsoring institution of the allegation, must be returned to the ACS. In the case of a finding of scientific misconduct, the investigator may no longer be eligible to participate in ACS funded awards, either as principal investigator, co-investigator, collaborator, mentor, or consultant. The investigator may also not be eligible to serve in any capacity in reviewing ACS grant proposals.

The publication of data serves to further the interests of the scientific pursuit, and specifically in the case of the ACS, the pursuit of eliminating the burden of cancer. Therefore, it is incumbent on both the ACS and the scientific community to insure that any instances of misrepresentation of findings in a scientific study are apparent to the scientific community. To that end, a finding of falsification or misrepresentation of data in a published forum must be

reported to the editor-in-chief of the journal in which such data is reported. It is the responsibility of the National Vice President for Extramural Research to coordinate such notification with the appropriate sponsoring institutional official according to their established policies and in conjunction with the policies of the journal. If the sponsoring institution does not have a policy regarding notification of the journal, then the National Vice President for Extramural Research will notify the editor-in-chief of the journal according to the journal's established policies.

In the case of findings of falsification or misrepresentation of published data supported by ACS funds, any active grant[s] held by the responsible individual will be terminated and that individual may no longer be eligible for ACS funding via any mechanism as a principal investigator, co-investigator, collaborator, mentor, or consultant. That individual may also not be eligible to participate in ACS review in any capacity.

### 3.1.3 Reviewer Misconduct and Conflict of Interest

In the event that an allegation of reviewer misconduct, such as failure to acknowledge a conflict of interest, is brought forward to a Program Director or other ACS staff, all effort must be made to investigate the validity of the allegation while maintaining the confidentiality of the individual making the allegation, the anonymity of the person against whom the allegation is made, and the integrity of the review process. The Program Director or other ACS staff contacted regarding the alleged misconduct must immediately inform the National Vice President for Extramural Research of the allegation, and provide all relevant information regarding the allegation. It is the National Vice President for Extramural Research's responsibility to evaluate the likelihood of reviewer conflict of interest or misconduct; and, if warranted, it is the National Vice President for Extramural Research's responsibility to handle the investigation internally or to inform the appropriate institutional office at the reviewer's institution about the allegation if aspects of the reviewer misconduct violate any of the tenets of professional behavior established by that institution. The National Vice President for Extramural Research will then serve as the point of contact between the ACS and the institutional official handling issues of reviewer misconduct.

Some elements of reviewer misconduct represent conduct that will only have relevance for the appropriateness of the reviewer's role as a member of a peer review committee. For instance, if there is inappropriate communication between reviewer and applicant or an applicant's mentor or colleagues. In a case of this type, all elements of the investigation of the reviewer misconduct will be handled by ACS personnel at the discretion of the National Vice President for Extramural Research. In cases where a reviewer does not retain the confidentiality of the applicant's information or the content of his or her application, and makes that information available to a third party, it will be at the discretion of the National Vice President for Extramural Research to handle the issue internally at ACS or contact the Office of Research Integrity at the reviewer's institution, based upon an initial assessment of whether such conduct violates the rules of conduct established by that institution. For instance, if there is communication of the contents of a grant proposal by a reviewer to a competitor in the same field as the applicant, or if the reviewer makes use of findings or ideas in an application to further his or her own research interests. In the instance of such an allegation, the American Cancer Society assumes no responsibility for carrying out the investigation of scientific misconduct, or in determining an

individual's innocence or guilt of the allegation of misconduct. It is the institution's responsibility to handle the misconduct according to their established procedures. However, acceptance or non-acceptance of the findings of the institutional investigation is at the discretion of the National Vice President, and additional clarification may be requested.. In any instance of a finding of reviewer misconduct, that individual may no longer be eligible to serve in any capacity in reviewing ACS grant proposals, and may be barred from receiving any ACS grant funds.

---

American Medical Association Manual of Style: a guide for authors and editors. 9<sup>th</sup> ed. Baltimore, MD: Williams & Wilkins; 1997:136-137; and from the American Cancer Society Confidentiality, Non Disclosure Rules and Conflict of Interest: Information for Reviewers of Grant Applications, Version 6/3/2005

## APPENDIX B: INSTRUCTIONS FOR SUBMITTING DELIVERABLES

### GRANT ACTIVATION FORMS ANNUAL PROGRESS/FINAL REPORTS TRANSFER REQUEST CHANGE OF INSTITUTION CHANGE OF TERM EXTENSION OF TERM GRANT CANCELLATION CHANGE OF PRINCIPAL INVESTIGATOR REPORTS OF EXPENDITURES

The American Cancer Society subscribes to the **Post Award Management System** provided by Altum proposalCENTRAL. The system is designed to collect grant post award information from grantees. Grantees are asked to keep their proposalCENTRAL profile current for the duration of the grant.

The site is used to upload all requests for grant changes and related documents, and required reports (deliverables). The site will house all reports, requests and correspondence pertaining to a grant and is accessible to both ACS program staff and grantees. Grantees may provide access to others at their institution (e.g. grants officers) using the instructions provided below.

All awardees of an ACS grant will need to upload deliverables, and then send an email (correspondence) to the Program Director/Program Coordinator informing the program office of the submitted deliverables. The first deliverable we will be collecting through the **Post Award Management System** is the “Activation Form.” For the Activation Form only, please also email Mary LeMahieu at [mary.lemahieu@cancer.org](mailto:mary.lemahieu@cancer.org) in the Research Business office notifying her that you have uploaded your Grant Activation Form.

#### **Uploading an Award Deliverable**

- Log onto <https://proposalcentral.altum.com>
- **PI must enter their ProposalCentral username and password in “Applicant Login” to access their award detail information**
- Click on the Awarded link or all Proposal link
- In the Status column, click on the Award Details link
- On the Award Details screen, click on the Deliverables link at the bottom of the screen

The schedule of deliverables due for the award is shown chronologically.

- Go to the **Deliverables Templates** section at the bottom section of the screen to select the appropriate template
- Download and save the template to your computer and complete it.
- To Submit Grant Deliverables and other documents, click the Upload link next to the scheduled deliverable and date
- Click “Browse” button to select the file from your computer.

- Click Save to upload the deliverable. You can replace the uploaded document with another document by clicking Browse....again, selecting a different document from your computer files and click the Save (Adding description of deliverable is optional)
- Click Close

### **Send Email (Correspondence) to an ACS Administrator**

- To send correspondence to Program Director at the ACS, click the “Correspondence” link from the Award Details screen
- From this page, you can see any correspondence that has already been sent by clicking on the Blue link in the Message column
- Use the Respond link to respond directly to a message you have received
- To send a new message, click “Send Correspondence to Program Director” at the top of the page
- Select the administrator(s) who should receive the correspondence email
- Enter a subject and text for the correspondence in the spaces provided
- Click the “Send Email” button to send the email(s) to the selected administrator

Once an application is awarded it moves from proposalCENTRAL into the Post Award Management System. People who previously had access to your application in proposalCENTRAL will not have access to your awarded grant in the Post Award Management System. You may need to allow access to different users than those listed in proposalCENTRAL to enable them to upload various reports on your behalf.

### **To allow to another user access to your award and to submit deliverable**

- Person(s) must be a registered user on proposalCENTRAL. If they are not, ask them to register as a new user at:

<https://proposalcentral.altum.com/login.asp>

- Once user is registered, from Award Detail screen click Contacts and User Access link
- Click on Manage User Access To Award at the top of the screen
- Enter and confirm email address of person
- Click on Add button
- Change the Permissions role from View to Administrator
- Click on Save button to activate access for new person

### **To upload other documents such as publications, CV, etc.:**

- Click the "Add Deliverable" link on the Award Deliverable screen
- Select "Other" from the drop down menu next to "Deliverable Type" from the pop up screen
- Type in the "Deliverable Description" (i.e. Publications; CV; etc...)
- Click "Browse" to upload their document
- Click "Save"

Additional information and help can be obtained through proposalCENTRAL customer support desk:

By phone: 1-800-875-2562 toll free

By email: [pcsupport@altum.com](mailto:pcsupport@altum.com)

## A. GENERAL INFORMATION

### 1. ACCESSING THE ACS GRANT APPLICATION SYSTEM

**NOTE:** In order to use the electronic grant application system, including printing copies and electronic submission, it is recommended that you have Adobe Acrobat Reader 5.0 or above. In addition, the system requires a compatible browser. Recommended for Windows is Internet Explorer 6,7 and 8, Firefox 3.0 and 3.5, Safari 3.1 and 4.0 (for Mac Users, although they can also download and use Firefox). In addition to the full version of Adobe Acrobat which can convert documents to PDF, Microsoft has an add-on for Office 2007 called the “XPS and PDF document converter” (or something similar) which is a free download for people who have licensed copies of Office 2007. It can convert any Word or Excel file into a read-only PDF.

Access the American Cancer Society Research site at [www.cancer.org](http://www.cancer.org).

- Select “Explore Research” followed by “Apply for a Research Grant” > “Grant Types”.
- Select the grant for which you are applying. You are now able to access the electronic grant application process at proposalCENTRAL.
- Once you reach proposalCENTRAL, follow their instructions to login/register and to complete and submit an application.
- The key steps for starting an application are as follows:  
Click on “Create New Proposal” to select a grant program and start your grant application. Locate the appropriate grant and click on “Apply Now” to create a proposal. Enter a Project Title (unless one is provided) and click SAVE. Once you have clicked on the “Save” button, the links to the other pages of the application appear in the Proposal Sections menu. Your saved application is stored under the “Manage Proposals” tab.

**Please note:** Detailed information is available through tutorials, provided on the proposalCENTRAL login page.

If you have problems accessing or using the electronic application process, click on “Help” or contact ALTUM Customer Service at [pcsupport@altum.com](mailto:pcsupport@altum.com) or 1-800-875-2562.

### 2. FORMATTING THE APPLICATION

Applicants must adhere to the following instructions.

- Insert your name in the header for each section of the application
- All application documents should be single-sided.
- **Type size:** Use 12 point Times New Roman or 11-point Arial as the minimum font size for the text of the application. A 10-point Times New Roman or 9-point Arial font type may be used for figures, legends, and tables.
- **Single-spaced text** is acceptable, and space between paragraphs is recommended.
- **Margins:** The margins of your text should be at least 0.5 inches all around, unless a form with different margins is supplied in the Application Templates.
- **Page numbering:**

**Cover Pages-** The first few pages of the application form are considered cover pages and are not numbered. The cover pages include the Signature Page, Contact Page, General Audience Summary and Structure Technical Abstract.

**Proposal Sections-** The proposal sections are listed in the Table of Contents and must be numbered in the upper right hand corner. Each section should be numbered independently.

- **Appendix:** The appendix is now part of the electronic application.

### 3. RESUBMISSION OF AN APPLICATION

Applications that are not funded may generally be resubmitted twice except for Postdoctoral Fellowship applications which may only be resubmitted once. Applicants are strongly encouraged to contact the appropriate Program Director prior to resubmission to discuss the previous reviews. Please follow these guidelines when resubmitting an application:

- Submit a complete application with a current date—electronic and paper copies.
- When resubmitted, the title of the project can be altered if necessary but should be appropriately marked as a first or second resubmission.
- Select the appropriate application number from the list of your prior submissions on proposalCENTRAL.
- The review committee code (e.g. TBE, CCE, CPPB, etc.) for the previous application must be provided where requested on the title page.
- A “Reply to Previous Review”, not to exceed 3 pages, should be placed where indicated in the Table of Contents of the Application Templates section. It should clearly and briefly address the points raised in the previous review and direct the reader to the specific sections of the text where revisions have been made. Revised portions of the text changed in response to the reviewers’ comments should be highlighted (e.g.: bold type, line in the margin, underlining, etc.). Copies of the reviewers’ previous critiques should be inserted immediately after the Reply to Previous Reviews as indicated in the Table of Contents.
- For resubmission, photocopies of the notarized citizenship document or transcripts are acceptable.

### 4. CHANGES TO THE APPLICATION

**Withdrawal of application:** Please advise the Society promptly, in writing (or email), should you decide to withdraw your application for any reason. Your letter (or email) to the Program Director identified in the application acknowledgment letter should include your name, the application number, and the reason for withdrawal. If you are withdrawing because you have accepted funding from another organization, please let us know who will be funding your work.

**Change of address:** Notify the Society in writing (email) of any changes of address, email or phone number, following the submission of an application. Include your name and the application number. We also recommend that you update your information in proposalCENTRAL.

**Change of institution:** If you are an applicant for an ACS grant and change your institution, contact the Program Director identified in the acknowledgment email, who will determine whether your application can be reviewed.

## 5. EXPLANATION OF REQUIRED INFORMATION

*Please note: Not all fields are required for all applications.*

**Project Title:** The title should not exceed 75 characters in length (including spaces). Do not use abbreviations unless absolutely necessary.

**Principal Investigator/Applicant Information:** Some (or all) of the required information will have been automatically filled in from your profile. The information was provided when you initially registered with proposalCENTRAL and completed the Professional Profile. If any of this information is not current at the time of submission, you will need to update the Professional Profile before finalizing this section and submitting the final version of your application. Pay particular attention to your contact information as all notifications to you will be sent using this information. Please keep contact information up to date.

**Key Personnel.** In addition to the Principal Investigator, Key Personnel are defined as individuals who will contribute to the scientific development or execution of the project in a substantive, measurable way whether or not salaries are requested. Typically, these individuals have doctoral or professional degrees although individuals at the masters or baccalaureate level can be included if their contribution meets the above definition of Key Personnel.

**Citizenship Status:** An appropriate selection must be made in the Professional Profile. At the time of the application, applicants must be US citizens, noncitizen nationals, or permanent residents of the US. Permanent residents must submit (as a .pdf copy) with the application notarized evidence indicating that they have a Resident Alien Card or “Green Card” (I-551) or have been approved for the issuance of such card as evidenced by an official passport stamp of the United States Immigration Service or I-797 Notice of Action indicating approval has been obtained. Noncitizen nationals are persons who, although not US citizens, owe permanent allegiance to the United States. They are generally persons born in outlying US possessions (e.g., American Samoa and Swains Island).

**Justification of Eligibility:** Applicants for American Cancer Society Extramural Grants must satisfy the eligibility requirements defined from each application type. Please indicate the month and year when your last degree was conferred, as well as the month and year of your first independent faculty (or equivalent) position where requested. If your case was evaluated by the American Cancer Society eligibility committee, include a copy of the letter the appendix, list it in the table of contents, and refer to it in the justification space provided.

**Justification of Designation “Priority Focus in Health Equity Research”:** Indicate on the title page of the application, “Health Equity” if the proposed study falls into the Priority Focus (Health Equity Research) in the Cancer Control and Prevention Research Program.

**Space:** If appropriate, indicate the approximate area of committed, independent research space provided by your institution to support your research program, as well as the name of the department chair responsible for verification of this research space. You must insert a value on the electronic form, even if you need to enter a 0 (zero).

**Institutional Official:** In addition to the name and address of the official authorized to sign for the institution, include an address for mailing checks. Institutional officials should sign the front page; “Per” signatures are not acceptable.

**Department Chair:** Indicate name, department, and email address of the department chair. Department chairs should sign the front page to affirm the title of investigator and the committed resources.

**Primary Mentor:** Fill out all of the required fields for your mentor information.

**Additional Mentor (s):** Fill in this section with the same required information as for your primary mentor (when appropriate).

## 6. GENERAL AUDIENCE SUMMARY

The general audience summary is a very important part of the application and is intended to provide a clear overview of the proposed research to people who are *not* trained in the sciences but who are interested in cancer research. These include stakeholders, ACS staff members, potential donors and the general public. **Stakeholders** are individuals without formal scientific or medical training who have a strong personal interest in the prevention and control of cancer. They are included as full voting members of all peer review panels. The Stakeholder evaluation of the general audience summary becomes an important part of the overall review of the application by the peer review committee since their primary focus is on how the proposed work will be of value to cancer patients and their families.

**ACS staff members** who work with major donors also use these summaries to identify projects appropriate to the interests of donors who wish to support specific areas of cancer research. Furthermore, summaries of all grants made by the Society are made available to the **general public**. ACS staff members with responsibility for communicating ACS research to local media may also use the summaries to describe the research funded in a particular region of the country.

The general audience summary must *not* duplicate the structured technical abstract. It should be written in a way that makes the project easily understood by the audience described above without scientific jargon. **See the Samples of General Audience Summaries in the Appendix for examples of a properly constructed summary.** This summary should describe the background to the research, the questions to be asked, and the information to be obtained. The use of symbols and Greek characters should be avoided for the general audience; if they must be used, they have to be spelled out since they will not appear as characters in the text.

*This form is limited to 3,000 characters, including spaces and will truncate at that point. Characters in excess of the limit are not transmitted with the application resulting in an incomplete summary. **Failure to submit this correctly may result in the disqualification of your application.***

If this application is funded, this description will become public information. Therefore, do not include proprietary/confidential information.

## 7. STRUCTURED TECHNICAL ABSTRACT

*Please note: not all applications require a structured technical abstract.*

The structured technical abstract is a clear and concise summary of the proposed research or scholarly project for general scientific audiences.

Please use the outline below. See the Appendix for an example of a structured technical abstract.

- **Background:** Provide a brief statement of the ideas and reasoning behind the proposed work.
- **Objective/hypothesis:** State the objective/hypothesis to be tested. Cite evidence or provide a rationale that supports it.
- **Specific aims:** Concisely state the specific aims of the study.
- **Study design:** Briefly describe the study design, emphasizing those elements you consider most relevant to assignment of the proposal for peer review.
- **Cancer relevance:** Provide a brief statement explaining the potential relevance of the proposed work to cancer and the American Cancer Society's mission of eliminating cancer as a major health problem.

*This form is limited to 3,000 characters, including spaces and will truncate at that point. Characters in excess of the limit are not transmitted with the application resulting in an incomplete summary. Please submit a complete Structured Technical Abstract within the character limit. **Failure to submit this correctly may result in the disqualification of your application.***

## 8. PROJECT CODING

*Please note: not all applications require project coding. Red asterisks indicate required fields. Submit this section electronically only.*

Donors frequently have an interest in funding particular types of cancer research. Thus, Research Topics, Areas of Research (Common Scientific Outline –CSO), and Types of Cancer must be selected for these summaries to be presented to donors for special funding opportunities. *See the Areas of Research in the Appendix for filling out the forms.* **Please note that in completing the Areas of Research section, appropriate items may also include those listed under Resources and Infrastructure Related to [specific area]. See the Appendix for specific terms and examples.**

The information requested is not part of the application used by the Peer Review Committee for scientific review, and should not be submitted with your paper copy. However, the information is important and assists the Society in communication to the public about its portfolio of applications and grants.

## 9. ASSURANCES AND CERTIFICATION

All activities involving human subjects or vertebrate animals must be approved by an appropriate institutional committee before the application will be funded by the American Cancer Society. Furthermore, compliance with current US Department of Health and Human Services and ACS guidelines for conflict of interest, recombinant DNA, and scientific misconduct is required. The assurances/certifications are made and verified by the signature of the institutional official signing the application.

**Vertebrate animals.** Every proposed research project involving vertebrate animals must be approved by an appropriate Institutional Animal Care and Use Committee (IACUC), in accordance with Public Health Service Policy on Humane Care and Use of Laboratory Animals, before the application will be funded by the American Cancer Society. Enter the date of the most recent IACUC approval in the space provided.

All research supported by the American Cancer Society (including subcontracted activities) involving vertebrate animals must be conducted at performance sites which are covered under an approved Animal Welfare Assurance **It is the responsibility of the institution to immediately report to ACS any action including recertification or loss of IACUC approval which may occur during the term of any award that is pertinent to the work described in the grant application.**

**Human subjects.** All proposed research projects involving human subjects must be approved by the appropriate Institutional Review Board (IRB).

The institution must have received approval from the Office for Human Research Protections (OHRP) of the US Department of Health and Human Services (DHHS). Enter the institution's Assurance of Compliance number(s) in the space provided. Copies of the DHHS policy and information regarding the assured status and assurance numbers of institutions may be obtained from OHRP. The definitions and further sources of clarification for all of these assurances are found in the NIH Grants Policy Statement (Revised 12/03), [www.grants.nih.gov/grants/policy](http://www.grants.nih.gov/grants/policy), or the NIH Office of Extramural Research.

If institutional review of human subjects (IRB certification) or vertebrate animal use (IACUC certification) has not been completed before the submission date of the application, you must indicate that the approval is pending on the certification page and give the appropriate institutional reference numbers if available. ***Certification of the institutional committee review, clearly labeled with the assigned American Cancer Society application number, must be received prior to activation of a grant for funding. Failure to supply the American Cancer Society with completed IRB and/or IACUC certifications prior to the approved start of funding will result in withholding of payments and may result in cancellation of funding.***

Please note: applications for the Institutional Research Grant and certain Health Professional Training Grants do not require submission of IRB and IACUC certifications. Institutions must, however, be in compliance with the requirements noted above in order to use American Cancer Society grant funding for activities involving human subjects or vertebrate animals.

**For funded grants, it is the responsibility of the institution to immediately report to ACS any action including recertification or loss of IRB approval which may occur during the term of the award that is related to the work described in the grant application.**

## **10. PI DATA SHEET AND RESEARCH PROMOTION INFORMATION**

*Submit this section electronically only.*

The requested information is for statistical purposes only and is not part of the application used by the Peer Review Committee for scientific review. This section will not print with the cover pages and does not need to be submitted with your paper copy.

## **11. APPLICATION SUBMISSION AND REQUIRED SIGNATURES**

Applications must be submitted in two formats: an electronic version and paper copies (original, printed electronic application with official signatures plus one additional copy).

### **A. SUBMISSION OF ELECTRONIC APPLICATION**

- **All application attachments must be uploaded as .pdf documents.** See proposalCENTRAL FAQ or contact support at 1-800-875-2562 if you need assistance.
- Validate the application on proposalCENTRAL. This is an essential step. An application that has not been validated cannot be submitted.
- Print application via proposalCENTRAL. To do so, choose “Print” on the menu and select “Print Signature Pages and Attached PDF Files”. **Do not print cover pages for an application that has not been validated.**
- If you wish, print and retain for your files the paper copies of the Demographic and Research Promotion Information and the Project Coding sections. Do not submit these sections in the paper copy of your application.
- Get all signatures on the paper copy before submitting. Please note, the original signed copy of the front page is NOT uploaded in the electronic version; it is to be submitted with the paper copies.
- If any modifications were made during the signature process, make certain that all sections of the electronic version are revised to match the paper copy that is being submitted.
- If you have technical questions regarding the electronic application process, feel free to contact Altum at [pcsupport@altum.com](mailto:pcsupport@altum.com) or 1-800-875-2562.
- Submitting electronic version of application should be done after your institution has prepared the application for mailing. You have until 5:00 PM Eastern time on the deadline date to complete the electronic submission. Note that the appendix materials are now submitted electronically. Paper copies will no longer be provided to reviewers so any appendix materials must be uploaded to proposalCENTRAL to be considered during the review process.

**Please note: You will not be able to make any changes to the forms or upload any modifications to the files after submission.**

## B. ASSEMBLY AND SUBMISSION OF PAPER COPIES

The original paper copy of the application must carry the signatures (front page) and contact information (second page) for

- The Applicant
- The Institutional Signing Official
- The Department Head

See program specific instructions for additional required signatures.

**The original application with official signatures plus one copy must be received by the American Cancer Society Corporate Center no later than 5:00 PM Eastern time on the next business day following the deadline date for the electronic submission.**

The paper copies must be assembled as described below. To reduce the chance of losing an application, we urge institutions to mail only one application and its copy per package. If more than one application is included in a package, provide a bright-colored cover sheet listing the applications enclosed and stating in ½ inch or larger lettering "MULTIPLE APPLICATIONS ENCLOSED." Both sets of the application (original application with official signatures plus the copy) must arrive in the same package arranged in the following order:

- **Original application with official signatures. This is the document that prints when “Print Signature Pages and Attached PDF Files” is selected. This includes Cover Pages, General Audience Summary, Structured Technical Abstract (if applicable), the Application Templates and the Appendix.**
- **One copy plus the original application.**

The original and the copy of the application should be held together with a rubber band. Please **do not** staple. Send the complete application package to:

**The American Cancer Society  
Extramural Grants Department  
250 Williams Street NW, 6<sup>th</sup> Floor  
Atlanta, GA 30303**

## B. PREPARING THE APPLICATION

### 1. COVER PAGES

The application cover pages include the Signature Page with Assurances and Certifications, Contact Page, General Audience Summary and Structured Technical Abstract. Most of the information that is collected online at proposalCENTRAL appears on the cover page. This includes applicant contact information and eligibility information, for example, citizenship. **IMPORTANT:** the applicant's mailing address must appear in the box with the headings "APPLICANT CURRENT INSTITUTION" and "MAILING ADDRESS." This is drawn from the information provided in the Professional Profile section of proposalCENTRAL. When completing the Professional Profile, applicants must select a nursing school for their proposed graduate study regardless of their status (enrolled, accepted or applying student.) In the fields below this, the preferred mailing address should be inserted.

**Additional Signatures** Both the Department Head and the Faculty Advisor are required to sign in the section "Additional Signatures."

**Structured Technical Abstract** If you are submitting RESEARCH PLAN A, complete this section by typing "Not Applicable" in the space provided. If you are submitting RESEARCH PLAN B, you are required to provide a structured technical abstract. Refer to the guidelines in Part A. Section 8 of these instructions.

## APPLICATION TEMPLATES

An application consists of several sections that must be uploaded before the online application is submitted. Templates for these sections are available once an application is started on proposalCENTRAL. The templates must be downloaded to a computer and completed offline using word processing software. Detailed below are the instructions for completing the individual sections. *The sections must be converted into .pdf documents before being uploaded. Please see proposalCENTRAL's FAQ or call support at 1-800-875-2562 if you need assistance.*

### 2. TABLE OF CONTENTS (PAGE 1.1)

The Table of Contents is pre-numbered. Complete the Table by adding the Appendix information. ***Note: there is no overall page limit for the completed application.***

### 3. REPLY TO PREVIOUS REVIEW (RESUBMISSIONS ONLY) (PAGE 2.1)

*IF THE APPLICATION IS A NEW SUBMISSION of a non-competitive renewal, upload the provided template with "Not Applicable" in the body.* In the rare case of a resubmission, this section should clearly and briefly address the points raised in the previous reviews and direct the reader to the specific sections where text revisions have been made. Text changed in response to

reviewers' comments should be identifiable in the revised application (e.g. bold type, line in the margin, underlining, etc).

#### **4. PREVIOUS CRITIQUES (RESUBMISSIONS ONLY)**

Electronic copies of the critiques for your previous submission can be downloaded from your "Submitted" page on proposalCENTRAL. Select the link to "View Review Info" then "View Summary Statement" and save the document to your computer. Upload the document to your new application with the other proposal sections.

#### **5. PROGRAM PLAN – PART I (PAGES 3.1, 4.1, 5.1)**

*(To be completed by the applicant)*

**Part I consists of sections A, B, C, D, and E.**

##### **A. Candidate Information**

**B. Biographical Information** In this section, include ONLY new information or relevant ongoing activities. (Do not replicate what was included in this section of your original Doctoral Scholarship application.) The reviewers will be looking for evidence of progress in the areas of professional contributions (i.e., publications, memberships, etc.) and how these activities contributed to your doctoral studies and dissertation research.

##### **C. Doctoral Program**

**D. Coursework and Program Progression Time Line (PAGES 4.1, 5.1).** Update the plan of the courses you previously projected to fulfill your degree requirements. On the timeline, provide all dates, even if some are still to be determined.

**E. Research Plan A or B (PAGE 6.1)** Complete the following section of the application by providing the information requested below on the template entitled "Research Plan" and using continuation pages as necessary. Use the subheadings as identified under Research Plan A or B, and adjust the page heading to indicate which plan you are submitting. The total length of this section must be no longer than five pages for Research Plan A and no longer than seven pages for Research Plan B. This page limit does not include the references, which should be placed at the end of the narrative. References may be numbered sequentially or cited in APA 5<sup>th</sup> Edition format. Refer to Formatting the Application in the Instructions - Part A, for information about font, type size, line spacing, etc.

**Instructions for Writing Research Plan A or B.** Based on the current status of your dissertation project, complete the appropriate outline below. Regardless of which plan is submitted, the committee will expect to see significant progress in a student's thinking and research plan (design, methods, etc.). The reviewers also will be looking for evidence of progress in the areas of professional contributions (i.e., publications, memberships, etc.) and how these activities contribute to the student's doctoral studies and dissertation research. Overall, in evaluating a renewal application, a great deal of emphasis will be placed on the scientific merit of the research plan in addition to the applicant's progress in other aspects of the doctoral program.

It is expected that individuals who are applying to renew their Scholarships will submit Research Plan Part B. However, individuals who have not begun the formal dissertation process (i.e., completed coursework and are ready or almost ready for proposal defense) may submit Research Plan Part A. If Part A is submitted, it must be significantly updated from the original application and include an explanation of the status of their dissertation. The research plan should reflect progress made in the program and coursework. An applicant who is uncertain which Research Plan to complete should consult with the American Cancer Society Program Director.

### **Research Plan A**

**Research Plan A** is for individuals who are about to or who have recently entered doctoral study. Research Plan A is NOT for people who have started to write the formal dissertation. You may have sections of the proposal completed based on course work or meetings with your faculty advisor; however, the dissertation is still in the early formative stages of development. Individuals completing this section are typically in the first or second year of their PhD program.

### **Project Narrative for Research Plan A**

#### **Topic**

- Be specific in describing the topic or problem that you would like to study and how you came to the idea, e.g., from clinical practice, a gap in the literature, course work readings and papers, your advisor, work on a research project, or some combination of factors.

#### **Review of Literature**

- Identify the databases you searched, e.g., MEDLINE, PubMed, PsychInfo, ASCO Abstracts, National Library of Medicine Gateway. Name the concepts, key words, or MESH terms that resulted in the most productive searches.
- Provide a critical review of the literature that provides strong support for the research topic or problem.
- Focus the review on what is known about your topic, what remains unknown, the evidence that is conflicting/mixed in support of your topic, and how your study will address a gap and advance cancer nursing knowledge.

#### **Contribution to Cancer Nursing**

- Describe the dominant contribution of your study to cancer nursing in one of the following areas: practice; education; basic, clinical, or translational research; public policy; survivorship issues; cancer control; or another relevant contribution.
- Describe where your dissertation fits in your overall critical research map or anticipated research trajectory, i.e., how does it build on your previous research experiences, if any, how does it provide a critical step to get you from point A to B, and how will it prepare you to further your research in this area of inquiry?

#### **Scientific Expertise of Faculty and Resources to Support the Dissertation**

- Describe the cancer nursing faculty and other cancer faculty available to assist and guide you in the development of your dissertation. Identify those individuals that you are considering or have already agreed to serve on your committee. Name the dissertation

chair, committee members, credentials, areas of expertise as related to the proposed research, and employers. People in distance degree programs must identify the individuals in their employing institution or community who will serve as adjunct faculty or members of the committee and tell how they will help you move your study forward

- Briefly describe the facilities and institutional resources available for your dissertation, e.g., clinical materials/patients, required laboratory equipment and bench space, office space for interviews, computers for data entry and analysis, software, transcription assistance, etc.

## **References (No page limit)**

### **Research Plan B**

**Research Plan B** is for individuals who are at a more advanced stage of dissertation work, e.g., coursework is soon to be or actually completed and an initial draft of the dissertation proposal is about to be written or already written, or the dissertation is more polished and ready for proposal defense, or the defense is completed. We encourage you to apply for a scholarship before the dissertation committee formally approves the proposal so your chair and committee members can consider the constructive comments of the ACS reviewers. Individuals completing this section would typically be finished with their coursework and in the third or fourth year of their PhD program. However, applicants who are at an earlier stage in their academic program, but who have a firm idea about what their dissertation research topic will be and how they will study it, can complete Plan B as a means to propel their work forward.

### **Project Narrative for Research Plan B**

#### **Title and Purpose of Study**

- State the title and purpose of the study.
- Identify the research questions, hypotheses, specific aims, and/or exploratory aims for the dissertation.
- Identify if the dissertation is your own independent work, a study that is a spin-off or extension of a faculty member's funded/unfunded research, or a secondary analysis of existing data and source/ownership of these data. If your study is a spin-off or a secondary analysis, provide a succinct description of the parent or primary study (plus funding source if any, grant number, name of principal investigator) that can help the review committee see the distinction between the studies.

#### **Review of Literature**

- Identify the databases you searched, e.g., MEDLINE, PubMed, PsychInfo, ASCO Abstracts, National Library of Medicine Gateway. Name the concepts, key words, or MESH terms that resulted in the most productive searches.
- Provide a critical review of the literature that provides strong support for the research topic or problem.
- Focus the review on what is known about your topic, what remains unknown, the evidence that is conflicting/mixed in support of your topic, and how your study will address a gap and advance cancer nursing knowledge.

### **Contribution to the Field**

- Describe the dominant contribution of your study to the health of persons with cancer or those at risk for cancer, with an emphasis on one of the following areas: practice; education; basic, clinical, or translational research; public policy; survivorship issues; cancer control; or another relevant contribution.
- Describe where your dissertation fits in your overall critical research map or anticipated research trajectory, i.e., how does it build on your previous research experiences, if any, how does it provide a critical step to get you from point A to B, and how will it prepare you to further your research in this area of inquiry?

### **Preliminary Work**

- Briefly describe any preliminary work conducted by you and what each study contributes to the dissertation, e.g., gathered preliminary data on effect size, developed an instrument, established recruitment and retention strategies, maximized minority enrollment, learned a new statistical analysis procedure, piloted an intervention, conducted descriptive research such as interviews or a survey, etc.
- Identify if you performed these preliminary studies independently, as a course assignment, and/or if you conducted these activities while working on faculty research.
- For **non-competing continuation applications**, describe the progress to date that you have made on your dissertation. Explain how a continuation of funding will contribute to the completion of the dissertation.

### **Research Design and Methods**

- Identify the research design.
- Describe the sample or target population including any exclusion and inclusion criteria. Provide support for the expectation that the sample can be obtained, for example, a letter of support for the study from a person who can authorize access to potential participants at a proposed study site.
- Describe the methodology for enrolling the sample, procedures for implementing the study, the use of intervention and control groups (if applicable), and the analysis plan for each research question or specific aim/hypothesis.
- Provide reliability and validity information for all standardized questionnaires or the methodology and analysis to be used to examine the psychometric properties of instruments.
- If conducting an intervention trial, describe any threats to the internal validity of the intervention and efforts to control or minimize these threats such as the plan for training and supervising personnel, and monitoring dose and intervention fidelity.
- If conducting a group comparison study, provide a power analysis to justify the sample size or describe why a power analysis is not included.

### **Scientific Expertise of Dissertation Committee and Resources to Support the Dissertation**

- Describe the cancer nursing faculty and other cancer faculty available to assist and guide you in the development of your dissertation. Identify those individuals that you are considering or have already agreed to serve on your committee. Name the dissertation chair, committee members, credentials, areas of expertise as related to the proposed research, and employers. Students in distance degree programs must identify the

individuals in their employing institution or community who will serve as adjunct faculty or members of the committee and tell how they will help you move your study forward

- Briefly describe the facilities and institutional resources available for your dissertation, e.g., clinical materials/patients, laboratory equipment and bench space, office space for interviews, computers for data entry and analysis, software, transcription assistance, etc. For requisite facility and university resources and those that must be allocated, provide a letter of support saying you will have access.

## **6. PART II: PROGRAM – ADVISOR INFORMATION (PAGES 7.1, 8.1)**

*(To be completed by the faculty advisor/dissertation chair)*

Complete items **A** and **B** of the application by providing the information requested. Up to four pages may be used. Please note that specific instructions for the Biographical Information form(s) appear below.

**Biographical Information for Faculty Advisor/Dissertation Chair** *(if these forms are not required, upload the provided template with “Not Applicable” in the body. See the instructions following.)*

If the faculty advisor has changed since your initial application or the dissertation chair has been chosen or changed since the initial application, please include a biographical sketch. The curriculum vitae must not exceed [three](#) pages; [only the PHS biosketch form will be accepted instead of the form provided online](#). Those applications that do not adhere to format guidelines will be automatically rejected.

## **7. LETTERS OF RECOMMENDATION AND SUPPORT**

*Letters of recommendation are not required for a non-competing renewal application.*

**Letters of Support:** if not submitted in the original application, a letter is needed from any individual who is serving as a local resource for an applicant from a distance learning program. Please include in the Application Appendix (see below).

## **8. APPLICATION APPENDIX**

In addition to the application templates, other key documents may be uploaded and submitted as part of the application. However, applicants are urged to keep this section as brief as possible.

Appended materials may include:

- Evidence of U.S. Permanent Resident status
- Letters of support from local mentors, consultants or collaborators
- Transcripts
- Letter from ACS Eligibility Committee confirming eligibility
- Recent reprints or preprints
- CDs/DVDs, mp4 Files

- Clinical Protocols

It is not necessary to number the pages of the appendix, but please list by categories (i.e., reprints, preprints, etc.) in the Table of Contents of the application.

## APPENDIX A: CLASSIFICATION CATEGORIES - AREAS OF RESEARCH

The areas of research are based on seven broad categories called the Common Scientific Outline (CSO) developed by the International Cancer Research Partnership (ICRP):

1. Biology
2. Etiology
3. Prevention
4. Early Detection, Diagnosis and Prognosis
5. Treatment
6. Cancer Control, Survivorship and Outcomes Research
7. Scientific Model Systems

Applicants are asked to select from the following codes:

Biology
---------

### 1.1 Normal Functioning

*Examples of science that would fit:*

- Developmental biology (from conception to adulthood) and the biology of aging.
- Normal functioning of genes, including their identification and expression, and the normal function of gene products, such as hormones and growth factors.
- Normal formation of the extracellular matrix.
- Normal cell to cell interactions.

### 1.2 Cancer Initiation: Alterations in Chromosomes

*Examples of science that would fit:*

- Abnormal chromosome number.
- Aberration in chromosomes and genes (e.g., in chronic myelogenous leukemia).
- Damage to chromosomes and mutation in genes.
- Failures in DNA repair.
- Aberrant gene expression.
- Epigenetics.

### 1.3 Cancer Initiation: Oncogenes and Tumor Suppressor Genes

*Examples of science that would fit:*

- Genes and signals involved in growth stimulation or repression, including oncogenes (Ras, etc.), and tumor suppressor genes (p53, etc.).
- Effects of hormones and growth factors and their receptors such as estrogens, androgens, TGF-beta, GM-CSF, etc.

### 1.4 Cancer Progression and Metastasis

*Examples of science that would fit:*

- Latency, promotion, and regression.
- Expansion of malignant cells.

- Interaction of malignant cells with the immune system or extracellular matrix.
- Cell mobility including detachment, motility and migration in the circulation.
- Invasion.
- Malignant cells in the circulation including penetration of the vascular system and extravasation
- Systemic and cellular effects of malignancy.
- Tumor angiogenesis and growth of metastases.
- Role of hormone or growth factor dependence/independence in cancer progression.

#### 1.5 Resources and Infrastructure (*Note: grants coded as 1.2 in previous versions become 1.5*)

*Examples of science that would fit:*

- Informatics and informatics networks.
- Specimen resources.
- Epidemiological resources pertaining to biology.
- Reagents, chemical standards.
- Education and training of investigators at all levels (including clinicians).

Etiology
----------

#### 2.1-Exogenous Factors in the origin and cause of cancer

*Examples of science that would fit:*

- Lifestyle factors such as smoking, chewing tobacco, alcohol consumption, parity, diet, sunbathing, and exercise.
- Environmental and occupational exposures such as radiation, second-hand smoke, radon, asbestos, organic vapors, pesticides, and other chemical or physical agents.
- Infectious agents associated with cancer etiology, including viruses (Human Papilloma Virus-HPV, etc.) and bacteria (helicobacter pylori, etc.)
- Viral oncogenes and viral regulatory genes associated with cancer causation.

#### 2.2-Endogenous Factors in the origin and cause of cancer

*Examples of science that would fit:*

- Free radicals such as superoxide and hydroxide radicals.
- Genes known to be involved or suspected of being mechanistically involved in familial cancer syndromes, e.g., BRCA1, Ataxia Telangiectasia, and APC.
- Genes suspected or known to be involved in “sporadic” cancer events, for example polymorphisms and/or mutations that may affect carcinogen metabolism (e.g., CYP, NAT, glutathione transferase, etc.).

#### 2.3-Interactions of Genes and/or Genetic Polymorphisms with Exogenous and/or Endogenous Factors

*Examples of science that would fit:*

- Gene-environment interactions.
- Interactions of genes with lifestyle factors, environmental and/or occupational exposures such as variations in carcinogen metabolism associated with genetic polymorphisms.

- Interactions of genes and endogenous factors such as DNA repair deficiencies and endogenous DNA damaging agents such as oxygen radicals or exogenous radiation exposure.

## 2.4-Resources and Infrastructure Related to Etiology

*Examples of science that would fit:*

- Informatics and informatics networks; for example patient databanks.
- Specimen resources (serum, tissue, etc.).
- Reagents and chemical standards.
- Epidemiological resources pertaining to etiology.
- Statistical methodology or biostatistical methods.
- Centers, consortia, and/or networks.
- Education and training of investigators at all levels (including clinicians).

## Prevention

### 3.1-Interventions to Prevent Cancer: Personal Behaviors that Affect Cancer Risk

*Examples of science that would fit::*

- Research on determinants of personal behaviors, such as diet, physical activity, sun exposure, and tobacco use, which affect cancer risk.
- Interventions to change personal behaviors that affect cancer risk.

### 3.2-Nutritional Science in Cancer Prevention

*Examples of science that would fit:*

- Quantification of nutrients and micronutrients.
- Studies on the effect(s) of nutrients or nutritional status on cancer incidence.
- Dietary assessment efforts including dietary questionnaires and surveys.
- Development, characterization and validation of dietary/nutritional assessment instruments.

### 3.3-Chemoprevention

*Examples of science that would fit:*

- Chemopreventive agents and their discovery, mechanism of action, development, testing in model systems and clinical testing.

### 3.4-Vaccines

*Examples of science that would fit:*

- Vaccines for prevention, their discovery, mechanism of action, development, testing in model systems and clinical testing.

### 3.5-Complementary and Alternative Prevention Approaches

*Examples of science that would fit:*

- Discovery, development and testing of complementary/alternative prevention approaches such as diet, herbs, supplements or other interventions which are not widely used in conventional medicine or are being applied in different ways as compared to conventional medical uses.

- Hypnotherapy, relaxation, transcendental meditation, imagery, spiritual healing, massage, biofeedback, etc., used as a preventive measure.

### 3.6-Resources and Infrastructure Related to Prevention

*Examples of science that would fit:*

- Informatics and informatics networks; for example patient databanks.
- Specimen resources (serum, tissue, etc.).
- Epidemiological resources pertaining to prevention.
- Clinical trials infrastructure.
- Statistical methodology or biostatistical methods.
- Centers, consortia, and/or networks.
- Education and training of investigators at all levels (including clinicians).

Early Detection, Diagnosis and Prognosis
--

### 4.1-Technology Development and/or Marker Discovery

*Examples of science that would fit:*

- Discovery of markers (e.g., proteins, genes) and/or imaging methods that are potential candidates for use in cancer detection, diagnosis and/or prognosis.

### 4.2-Technology and/or Marker Evaluation with respect to Fundamental Parameters of Method

*Examples of science that would fit:*

- Development, refinement and preliminary evaluation (e.g., animal trials and Phase I human trials).
- Preliminary evaluation with respect to laboratory sensitivity, laboratory specificity, reproducibility, and accuracy.

### 4.3-Technology and/or Marker Testing in a Clinical Setting

*Examples of science that would fit:*

- Evaluation of clinical sensitivity, clinical specificity and predictive value (Phase II or III clinical trials).
- Quality assurance and quality control.
- Inter and intra-laboratory reproducibility.
- Testing of the method with respect to effects on morbidity and/or mortality.
- Study of screening methods including compliance, acceptability to potential screeners, receiver-operator characteristics.

### 4.4-Resources and Infrastructure Related to Detection, Diagnosis or Prognosis

*Examples of science that would fit:*

- Informatics and informatics networks; for example patient databanks
- Specimen resources (serum, tissue, images, etc.)
- Clinical trials infrastructure.
- Epidemiological resources pertaining to risk assessment, detection, diagnosis, or prognosis.
- Statistical methodology or biostatistical methods.
- Centers, consortia, and/or networks.

- Education and training of investigators at all levels (including clinicians).

Treatment
-----------

### 5.1- Localized Therapies - Discovery and Development

*Examples of science that would fit:*

- Discovery and development of treatments administered locally that target the organ and/or neighboring tissue directly, including but not limited to surgical interventions and radiotherapy.
- Therapies with a component administered systemically but that act locally (e.g., photodynamic therapy, radioimmunotherapy and radiosensitizers).
- Development of methods of drug delivery.

### 5.2- Localized Therapies - Clinical Applications

*Examples of science that would fit:*

- Clinical testing and application of treatments administered locally that target the organ and/or neighboring tissue directly, including but not limited to surgical interventions and radiotherapy.
- Clinical testing and application of therapies with a component administered systemically but that act locally (e.g., photodynamic therapy and radiosensitizers).
- Phase I, II or III clinical trials of promising therapies that are administered locally.

### 5.3-Systemic Therapies - Discovery and Development

*Examples of science that would fit:*

- Discovery and development of treatments administered systemically such as cytotoxic or hormonal agents, novel systemic therapies such as immunologically directed therapies (vaccines, antibodies), gene therapy, angiogenesis inhibitors, apoptosis inhibitors and differentiating agents.
- Defining molecular signatures of cancer cells.
- Identifying molecular targets for drug discovery. Includes mechanistic studies of cellular metabolism, combinatorial chemical synthesis, drug screening, development of high throughput assays and testing in model systems.
- Investigating the molecular mechanisms of drug resistance and pre-clinical evaluation of therapies to circumvent resistance.
- Development of methods of drug delivery.

### 5.4-Systemic Therapies - Clinical Applications

*Examples of science that would fit:*

- Clinical testing and application of treatments administered systemically such as cytotoxic or hormonal agents, novel systemic therapies such as immunologically directed therapies (vaccines, antibodies), gene therapy, angiogenesis inhibitors, apoptosis inhibitors and differentiating agents.
- Phase I, II or III clinical trials of promising therapies administered systemically.

### 5.5-Combinations of Localized and Systemic Therapies

*Examples of science that would fit:*

- Development and testing of combined approaches to treatment.
- Clinical application of combined approaches to treatment such as systemic cytotoxic therapy and radiation therapy.

#### 5.6-Complementary and Alternative Treatment Approaches

*Examples of science that would fit:*

- Discovery, development, and clinical application of complementary/alternative treatment approaches such as diet, herbs, supplements, natural substances or other interventions which are not widely used in conventional medicine or are being applied in different ways as compared to conventional medical uses.

#### 5.7-Resources and Infrastructure Related to Treatment

*Examples of science that would fit:*

- Informatics and informatics networks; for example clinical trial networks and databanks.
- Mathematical and computer simulations.
- Specimen resources (serum, tissue, etc.).
- Clinical trial groups.
- Epidemiological resources pertaining to treatment.
- Statistical methodology or biostatistical methods.
- Drugs and reagents for distribution and drug screening infrastructures.
- Centers, consortia, and/or networks.
- Education and training of investigators at all levels (including clinicians).

### Cancer Control, Survivorship and Outcomes Research

#### 6.1-Patient Care and Survivorship Issues

*Examples of science that would fit:*

- Quality of life.
- Pain management.
- Psychological impacts of cancer survivorship.
- Rehabilitation.
- Reproductive issues.
- Long term morbidity.
- Symptom management, including nausea, vomiting, lymphedema, neuropathies etc.
- Prevention of treatment related toxicities and sequelae including symptom management, prevention of mucosities, prevention of cardiotoxicities, etc.

#### 6.2-Surveillance

*Examples of science that would fit:*

- Epidemiology and End Results Reporting (e.g., SEER).
- Surveillance of cancer risk factors such as diet, body weight, physical activity, sun exposure, tobacco use.
- Analysis of variations in risk factor exposure by demographic or other factors.
- Registries which track incidence, morbidity and/or mortality related to cancer.
- Trends in use of interventional strategies.
- Method development for risk factor surveillance.

#### 6.3-Behavior

*Examples of science that would fit:*

- Behavior medicine research and interventions.
- Influence of social factors, such as, community, policy, education, and legislation, on behaviors related to cancer control.
- Attitudes and belief systems and their influence on psychological health and on behaviors related to cancer control. For example, how beliefs can alter attempts to seek screening, detection, and treatment
- Interventions to change attitudes and beliefs that affect behavior related to cancer control and cancer outcomes.
- Influences of attitudes and beliefs on compliance to treatment and prevention protocols.
- Psychological or educational interventions to promote behaviors that lessen treatment-related morbidity and promote psychological adjustment to the diagnosis of cancer and to treatment effects.
- Burdens of cancer on family members/caregivers and psychological/behavior issues.

#### 6.4-Cost Analyses and Health Care Delivery

*Examples of science that would fit:*

- Analyses of cost effectiveness of methods used in cancer prevention, detection, diagnosis, prognosis, treatment, and survivor care/support.
- Development and testing of health service delivery methods
- Interventions to increase the quality of health care delivery
- Impact of organizational, social, and cultural factors on access and quality of care
- Studies of providers, such as geographical or care-setting variations in outcomes
- Effect of reimbursement and/or insurance on cancer control, outcomes and survivorship support.
- Access to care issues.

#### 6.5-Education and Communication

*Examples of science that would fit:*

- Development of communication tools and methods.
- Education of patients, health care providers, at-risk populations, and general population about cancer.
- Communication to patients regarding therapeutic options.
- Educational interventions to promote self-care and symptom management.
- Communicating cancer risk to underserved populations, at-risk populations, and the general public.
- Alternative teaching methods to communicate therapeutic options and risk reduction behavior to patients or the general public.
- Communication of lifestyle models that reduce cancer risk, such as communication of nutrition interventions.
- Communicating smoking and tobacco cessation interventions.
- Special approaches and considerations for underserved and at-risk populations.
- Education, information, prevention/screening/assessment systems for the general public, primary care professionals or policy makers.
- Training, predictive cancer models, pain management, and surveillance systems for primary care professionals, telehealth/telemedicine applications.

- Communication regarding cancer genetics, managed oncology care, communicating with survivors.
- Barriers to successful health communication.

#### 6.6-End of Life Care

*Examples of science that would fit:*

- End of Life Care issues including palliative care, psychological interventions with families at end of life, hospice care, pain management for terminally ill patients, etc.

#### 6.7-Ethics and Confidentiality in Cancer Research

*Examples of science that would fit:*

- Informed consent modeling and development.
- Quality of Institutional Review Boards (IRB).
- Protecting patient confidentiality and privacy.
- Research ethics.

#### 6.8-Complementary and Alternative Approaches for Supportive Care of Patients and Survivors

*Examples of science that would fit:*

- Hypnotherapy, relaxation, transcendental meditation, imagery, spiritual healing, massage, biofeedback, etc., as used for the supportive care of patients and survivors.
- Discovery, development and testing of complementary/alternative approaches such as diet, herbs, supplements or other interventions that are not widely used in conventional medicine or are being applied in different ways as compared to conventional medical uses.

#### 6.9-Resources and Infrastructure Related to Cancer Control, Survivorship and Outcomes Research

*Examples of science that would fit:*

- Informatics and informatics networks.
- Clinical trial groups related to cancer control, survivorship, and outcomes research.
- Epidemiological resources pertaining to cancer control, survivorship, and outcomes research.
- Statistical methodology or biostatistical methods.
- Surveillance infrastructures.
- Centers, consortia, and/or networks.
- Education and training of investigators at all levels (including clinicians).
- Psychosocial, economic, political and health services research frameworks and models.

### Scientific Model Systems

#### 7.1-Development and Characterization of Model Systems

*Examples of science that would fit:*

Development and characterization of model systems, including but not limited to:

- Computer simulation model systems and computer software development.
- In vitro models systems.
- Cell culture model systems.

- Organ and tissue model systems.
- Animal model systems such as drosophila and c. elegans, zebra fish, mouse, etc.

## 7.2-Application of Model Systems

*Examples of science that would fit:*

Application of model systems, including but not limited to:

- Computer simulation model systems and computer software development.
- In-vitro models systems.
- Cell culture model systems.
- Organ and tissue model systems.
- Animal model systems such as drosophila and c. elegans, zebra fish, mouse, etc.

## 7.3-Resources and Infrastructure Related to Scientific Model Systems

*Examples of science that would fit:*

- Models made available for distribution to the scientific community.
- Centers, consortia, and/or networks.
- Education and training of investigators at all levels (including clinicians).

## **APPENDIX B: SAMPLE OF GENERAL AUDIENCE SUMMARY**

Blood and marrow transplant (BMT) is a very intensive therapy used to cure patients with cancer who have no other hope for a cure. The therapy often requires patients to be aware from home for several months. During this time, they need to have one or more family or friend caregivers who can stay with them and assist with their physical care and emotional support. These caregivers are vital to the success of the transplant. We know from other diseases where family members or friends assist with the care of the patient that this can be very stressful but rewarding for the caregiver. The caregivers need special education in order to be able to provide good care. Sometimes the caregivers become so stressed that they become physically ill. There have been a few research studies that have looked to see if BMT caregivers have the same experience as caregivers of other types of patients. Virtually all of the subjects in these studies have been upper middle class Caucasians. Caregivers from other cultures may have a very different experience. Because these caregivers are so critical to the success of BMT, we need to understand what their experience is so that we can develop methods to give them better support and keep them healthy and able to provide care. It is important to understand how to do this for caregivers from all cultures. As we reach an understanding of BMT caregivers from different cultures, some of this knowledge may also be applied to caregivers of other cancer patients receiving other types of therapy.

## APPENDIX C: SAMPLE OF STRUCTURED TECHNICAL ABSTRACT

(Required for applications submitting Research Plan Part B)

**Title of Project:** Effects of Social Support in Older Women with Breast Cancer

**Background:** Age is the most important determinant of breast cancer (BC) risk. BC is the most commonly diagnosed cancer in women with nearly 216,000 estimated new diagnoses in the United States during 2004. Over 65% of women diagnosed with BC between 1997- 2001 were 55 years or older. By 2011, 10,000 Americans will turn 65 years old every day. Thus, there is a critical need for evidence that can contribute to age-specific care guidelines specific to the elderly experiencing cancer. Evidence describing the daily living perspective of an elderly person with cancer has increased over the last decade, but questions remain. A particular question of interest is the impact of the cancer symptom experience on an elder's functional ability, specifically social functioning. With the understanding that social relationships are central in a woman's life, social functioning takes on importance in the BC experience. Objective: The main questions of this study are "Does BC treatment-related symptoms affect a woman's ability to engage in social relationships and leisure activities?" and "How does perceived social support, age, and marital status affect this relationship?"

**Specific aims:** The specific aims and hypotheses proposed to explore these questions will include:

Specific Aim 1. To compare the symptom experience and effect it has on social functioning in two cohorts: older women with BC (age > 60) and younger women with BC (age < 60).

Hypothesis 1a: The increased number cancer-related symptoms and their severity will be related to decreased social functioning of women.

Hypothesis 1b: Increased age in addition to number and severity of symptoms will decrease a women's social functioning.

Specific Aim 2. To examine if perceived social support moderates the effect of the symptom experience on social functioning in a cohort of elderly women with BC.

Hypothesis 2: Increased perceived social support will decrease the effect of symptom experience on social functioning.

Specific Aim 3. To determine to what extent perceived social support is related to age and marital status in older and younger women with BC.

Hypothesis 3a: Older women with BC will have lower perceived social support than younger women with BC.

Hypothesis 3b: Older women with BC who are married or partnered will have increased social support compared to older women who are not married or partnered.

Exploratory Aim. To explore if a particular symptom or combination of symptoms have an increased impact on social functioning.

**Study design:** This study will be a secondary data analysis of data previously collected to evaluate the effectiveness of a strategy to manage cancer-related fatigue. The data set includes responses to a variety of quantitative measures completed by 221 women, aged 30 to 83. Over one third of the sample is aged 60 or older. After data cleaning, a variety of statistical tests will

be conducted. Multivariate linear regression will be used for Specific Aim 1. Multi-step hierarchical regression analysis will test the moderating effects of social support in Specific Aim 2. Independent t-tests will be used to explore expected age differences described in Specific Aim 3. Depending if one or more symptoms are evaluated, the exploratory aim will be evaluated using Pearson correlation coefficient or analysis of variance.

**Cancer relevance:** The results of this study will increase understanding of the impact of cancer symptoms on social functioning and the moderating effects of social support in the BC experience. Anticipated age related differences will be explicated. Additionally, identifying the symptom or group of symptoms with significant impact on social functioning may also have clinical applications.

## **APPENDIX D: APPLICATION REVIEW CRITERIA - NON-COMPETING RENEWAL**

The following items are used by reviewers in evaluating renewal applications for the Doctoral Degree Scholarship in Cancer Nursing.

- If the application is a resubmission, comment on the adequacy of the response to the prior review.

### **Biographical Information (Applicant)**

- Per cent of program completed by applicant; applicant's GPA
- Adequate continuing education relevant to proposed area of study
- Current relevant specialty certification(s)
- Sustained or enhanced involvement in cancer related professional organizations
- Continued commitment to cancer-related volunteer activities and any leadership roles

### **Professional Contributions**

- Research or clinical presentations related to area of study
- Authorship on publications in area of study.
- Research involvement; consider role i.e., leadership on own or another's research study versus performance of research tasks such as data collection or management
- Any other professional contributions (standards, teaching tools, videos) related to area of study?

### **Doctoral Program**

- Evidence that proposed program of study and experiences planned under the renewal support the proposed research
- Appropriate and feasible doctoral program timeline and applicant's progress since initial application is adequate (see also Program Plan Part II - B. for advisor's comments)

### **Research Plan**

#### ***Part A:***

- Description of the problem and presentation of the applicant's reason for interest in the topic
- Appropriateness of literature review, particularly given the applicant's time in the program
- Potential contribution to health of people affected by cancer or at risk for cancer
- Relevance to previous research and to building a program of research
- Resources available to conduct the research

***or Part B***

- Purpose and aims of study; are the latter specific and feasible?
- How well did the background / review of literature summarize the state of knowledge in the area and gaps? Did the results support the proposed research question? Was the method for conducting database searches described?
- Potential of the proposed research to impact the health of people affected by cancer or at risk for cancer
- Relevance of dissertation research to previous research and to building a program of research
- Appropriateness of design / methodology for the research question, and the applicant's time in the program.
- Composition of the dissertation committee (consider also the background and qualifications of the dissertation chair if different from the faculty advisor. For those enrolled in distance programs, consider the individuals who will act as local research mentors)
- Resources available to conduct the research and evidence of access to them

**Part II: Program – Advisor Information**

- Evidence of relevant educational and research experience in the training plan
- *[Comment only if the faculty advisor has changed since the initial application or the dissertation chair has been chosen or changed.]* Qualifications of faculty advisor and/or dissertation chair to mentor student in proposed research area.
