

Don't Wait to Vaccinate

cancer.org/hpv

DID YOU KNOW...

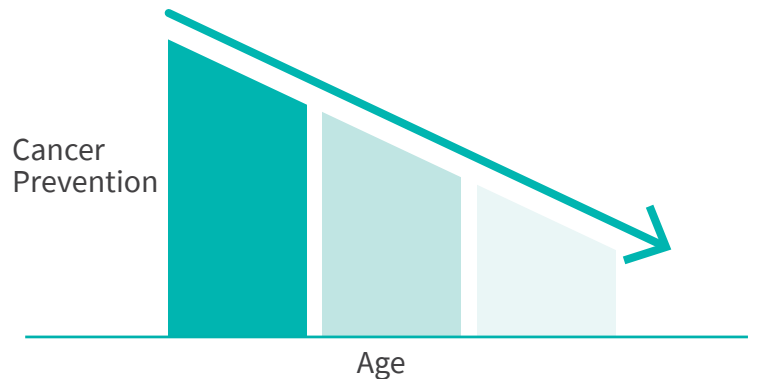

The American Cancer Society recommends that all children get vaccinated against HPV between the ages of **9 and 12** to **help prevent six types of cancer**.

Age Matters

When you vaccinate your child on time, you help protect them from HPV cancers. **HPV vaccination works best when given before age 13. Vaccination at the recommended ages will prevent more cancers than vaccination at older ages.**

HPV vaccination can prevent more than 90% of cancer when given on-time.

On Time
Ages 9-12
2 Doses
6-12 months apart

Late
Ages 13-14
2 Doses
6-12 months apart

Catch Up & Late
Ages 15-26
3 Doses
1st dose at visit one
2nd dose 1-2 months later
3rd dose 6 months after 1st dose
