Preventive Medicine Residency Training in Cancer Prevention and Control

Supported by funding from the American Cancer Society Physician Training Award in Cancer Prevention, we invite applications for two-year residency positions focusing on cancer prevention and control. This program involves the completion of the master’s degree in public health, as well as intensive practicum experience involving the development of clinical, research, teaching, and public health skills relevant to a career that includes cancer prevention and control. Successful completion of the training qualifies residents to apply for specialty board certification by the American Board of Preventive Medicine. Qualified applicants must have completed at least one year of clinical residency training in an ACGME-accredited program. For more information and application materials, please contact the program directors for participating residencies listed below:

**Boston University**
Jonathan Berz, MD MSc | linda.neville@bmc.org
